KIM JULONGBAYAN

AI & Automation Developer | Workflow Design | Agent Approval Rules

Quezon City, Metro Manila, Philippines | kljulongbayan@gmail.com | +63 961 529 9305
Portfolio: kimlj.dev | GitHub: github.com/kimlj | LinkedIn: linkedin.com/in/kimjulongbayan

PROFESSIONAL SUMMARY

- Developer with 5+ years building software and 1-2 years in AI automation. Turns operational rules into working systems, with documented exceptions, restricted access, and human approval.
- Sole engineer on a US healthcare staffing platform used every workday by 15 people. Working examples at kimlj.dev/hub.

SKILLS

- Workflow design: billing and payroll rules, exception handling, reconciliation, approval trails, written design decisions
- AI agents: Claude API, OpenAI API, tool permissions, knowledge files, independent review, cost tracking
- Automation: n8n, Make, Zapier, Power Automate, Google Sheets API, Apps Script, Slack integrations
- Delivery: Python, TypeScript, REST APIs, PostgreSQL, role-based access, Docker, Linux VPS, Git

EXPERIENCE

MDS Pro Solutions - Full Stack Developer (Contract) | Feb 2026 - Present

- Own the timekeeping and billing platform end to end, from business rules to deployment and support, for 15 daily users across a Philippine team and a US owner.
- Designed billing sync around the owners' Google Sheets workflow; fills blank cells and flags mismatches without overwriting figures entered by a person.
- Generate timesheets, payroll, and client invoices from one shared calculation; corrections require an attributed approval trail.
- Built an AI assistant that reads database and spreadsheet data through restricted tools, with a read-only database account and per-question cost tracking.
- Built the public site's assistant around a written knowledge file; gives it no action tools and routes unanswered questions to HR without storing the transcript.
- Documented billing decisions and reconciliation rules; protect production patient information with role-based access and encrypted off-site backups.

Independent Software Developer | 2021 - Present

- Build and maintain web, mobile, and automation products from architecture through release; AI automation work covers the most recent 1-2 years.

PROJECTS

Cockpit - Local Agent Development Workspace

- {'Built on DeepSeek Harness': 'a builder agent, automated checks, a separate read-only reviewer, correction, then owner approval and a saved checkpoint.'}
- Local, single-user product. Short video at kimlj.dev/cockpit, made by Claude Code; linked from kimlj.dev/hub.

Shift Ops Console - Automation Demonstrator

- Mapped detection, routing, alerts, approvals, and reporting across n8n, Make, Zapier, Power Automate, Apps Script, and Looker Studio using a simulated 100-person workforce.
- Caught 359 of 370 planted anomalies; corrected the scoring method and measured a 1.0% false-positive rate.

Jobsift - Job Discovery and Drafting Pipeline

- Rebuilt an n8n workflow in Python when it outgrew the platform; filters listings before AI scoring and sends results to Google Sheets and Telegram.
- Compiles career evidence into one checked brief; separates extraction, drafting, and claim verification so each role receives only its relevant information.

EDUCATION

- {'BS Information Technology coursework, AMA Computer College Makati': '3 of 4 years completed; degree not conferred.'}
