

KIM JULONGBAYAN

Full-Stack Developer | AI and LLM Integration | Consumer Web Products
Quezon City, Metro Manila, Philippines | kljulongbayan@gmail.com | +63 961 529 9305
Portfolio: kimlj.dev | GitHub: github.com/kimlj | LinkedIn: linkedin.com/in/kimjulongbayan

PROFESSIONAL SUMMARY

- Full-stack developer, 5+ years, sole engineer on a production platform 15 people use every workday. I build products end to end: landing page, signup, checkout, third-party integrations, the AI layer, and the report screen someone has to read.
- 776 hours and 16,365 prompts in Claude Code across 43 projects (150 active days, as of Sep 2026), counted from session transcripts and published at kimlj.dev.

TECHNICAL SKILLS

- Frontend: React, Next.js App Router, TypeScript, Tailwind CSS, Vite, dashboard and report interfaces
- Backend and data: Node, Fastify, Express, Python, FastAPI, PostgreSQL, Supabase, row-level security, MongoDB, SQLite
- AI and LLM: Claude API, OpenAI GPT-4o, structured output against a fixed schema, embeddings and similarity matching, per-question token and cost accounting
- Integrations: OAuth connect flows, hosted checkout, webhooks, scheduled jobs, file and image upload, Google Sheets API, Gmail and IMAP, Chrome MV3 extensions
- Security and deployment: read-only database roles, append-only audit trails, filtered outbound fetches, Docker, Linux VPS, Nginx, Vercel, CI/CD

EXPERIENCE

MDS Pro Solutions - Full Stack Developer (Contract) | Jun 2026 - Present

- Sole engineer on the timekeeping and billing platform (TypeScript, Fastify, Supabase/Postgres, Chrome MV3 extension) used every workday by 15 people: a nursing team across the Philippines and the owner in the US.
- Shipped natural-language database querying on the Claude API. The model writes the query, a read-only role runs it under a row cap, and the answer is the records that came back rather than anything the model remembered.
- Designed and built the seven-screen admin dashboard the business runs on: live status, timesheets, payroll, invoicing and corrections.
- Made the record defensible: 35 access policies over 15 tables, entries append-only, every correction attributed and approved. Found and closed a read that exposed every nurse's billed rate.

Independent Full-Stack Developer | 2018 - Present

- Built and shipped web, mobile and AI products end to end, including WordWarz.io, live on the web and the iOS App Store: 570 players across 1,045 matches, grown by word of mouth alone.

SELECTED PROJECTS

Jobsift - Research, Extraction and Claim-Checking Pipeline | Python, Claude API

- Pulls listings from five sources, each behind one interface, and turns them into structured records with an LLM: extract, enrich, score, keep the evidence. Cheap filters run first, so a rejected item costs no AI call.
- Every claim a generated draft makes is checked by a second pass against the source facts. Anything that cannot be confirmed is reported as unchecked rather than quietly deleted, because a claim nobody lists reads as one somebody approved.

E-Commerce Platform - Full Consumer Flow | Next.js, MongoDB, PayMongo

- The whole path in one build: marketing pages, signup and login, search, cart, a hosted checkout session with the payment provider and the return flow after it, an AI product assistant, and an admin behind its own login for orders, products, users and settings.

RecodeAI - Long AI Job With a Status Experience | Next.js, Claude API

- Crawls a site, reads its brand, generates a redesign and deploys it live, streaming each step and its running cost to the browser so a job of several minutes shows its work, not a spinner.

CouchProof - Connected Data, Uploads and Generated Narrative | Next.js, Supabase, Prisma

- Connects a third-party account over OAuth, imports the user's records, accepts file uploads, and writes summaries over what came back, with charts and maps beside them.

EDUCATION

- Bachelor of Science in Information Technology, AMA Computer College Makati (3 of 4 years completed)
