KIM JULONGBAYAN

AI Automation Specialist | Make, n8n, Google Workspace and AI Agents

Quezon City, Metro Manila, Philippines | kljulongbayan@gmail.com | +63 961 529 9305
Portfolio: kimlj.dev | GitHub: github.com/kimlj | LinkedIn: linkedin.com/in/kimjulongbayan

PROFESSIONAL SUMMARY

- Developer with 3 years of professional software development experience and 1-2 years in AI automation. Builds and maintains internal workflows, reporting tools, and AI agents.
- Sole engineer on MDS Pro's production platform, used every workday by 15 people. Hands-on Make and n8n work includes a clearly labeled workforce demonstrator.

TECHNICAL SKILLS

- Automation: Make, n8n, Google Apps Script, Google Sheets API, Slack integrations, scheduled jobs, REST APIs and webhooks
- AI workflows: OpenAI GPT-4o, Claude API, prompt engineering, structured outputs, tool-using agents, and usage cost tracking
- Development: Python, JavaScript, TypeScript, PostgreSQL, Supabase, SQLite, Git, Docker and Linux VPS
- Process documentation: workflow decisions, troubleshooting notes, recovery steps and user onboarding

EXPERIENCE

MDS Pro Solutions - Full Stack Developer (Contract) | Feb 2026 - Present

- Built and maintains the internal timekeeping and billing platform used by the Philippine team and the US owner, covering clock-ins, corrections, payroll and invoices.
- Automated billing updates into Google Sheets, filling blank cells and reporting mismatches without overwriting figures entered by the owners.
- Built a Claude agent that answers questions using the database and billing sheet, with read-only access, a result limit and per-question cost tracking.
- Built Apps Script financial reports across two companies, with independent checks reconciling the sheet, pay-period totals and dashboard figures.
- Documented billing decisions and correction flows; generated timesheet, payroll and invoice workbooks from one shared pay calculation.
- Maintains encrypted off-site database backups and service monitoring with problem alerts and recovery notifications.

PROJECTS

Shift Ops Console - Workflow Automation Demonstrator | Make, n8n, Apps Script, Slack

- Built a pipeline for a simulated 100-person workforce across nine time zones. n8n checks rules from a Google Sheet; Make groups exceptions and routes Slack notifications.
- Diagnosed repeated sheet reads in n8n that multiplied incoming records; fixed the read nodes to run once and tested the rules against fixtures.

Cockpit - Agent Workflow Control Plane (not public yet) | Built on DeepSeek Harness

- Built a workflow where an agent develops, automated tests check, a separate agent reviews, and the owner approves before a git checkpoint is saved.
- Available for a live walkthrough and commit history review. Claude Code made the overview video at kimlj.dev/cockpit; other demos at kimlj.dev/hub.

Jobsift - AI Job Pipeline | Python, n8n, GPT-4o

- Started with Gmail extraction, GPT-4o scoring, Sheets logging and Telegram in n8n; rebuilt in Python when the workflow reached its limits.
- Runs unattended on a Linux server, filtering jobs before AI scoring; keeps a Google Sheets archive, alerts and documented recovery procedures.

EDUCATION

- BS Information Technology, AMA Computer College Makati (3 of 4 years completed; degree not conferred)
