KIM JULONGBAYAN

AI Automation Engineer | n8n, Make, Zapier | APIs, Webhooks and LLM Tools

Quezon City, Metro Manila, Philippines | kljulongbayan@gmail.com | +63 961 529 9305
Portfolio: kimlj.dev | GitHub: github.com/kimlj | LinkedIn: linkedin.com/in/kimjulongbayan

PROFESSIONAL SUMMARY

- Automation developer with 3 years of professional software development experience and 1-2 years building AI into business workflows. Sole engineer on a production platform 15 people use every workday.
- Picks the simplest tool that works, tests before shipping, monitors what runs, and documents every automation so the team can use it without me.

TECHNICAL SKILLS

- Automation: n8n, Make, Zapier, Power Automate, REST APIs, webhooks, JSON, scheduled jobs, Gmail and IMAP, Slack, Telegram Bot API
- AI and LLM: Claude API, OpenAI, DeepSeek, tool use, AI agents with read-only access, structured output validation, cost tracking
- Data and reporting: Google Sheets API, Apps Script, PostgreSQL, Supabase, SQLite, ExcelJS reports, live dashboards
- Languages and infrastructure: JavaScript, TypeScript, Python | Docker, Linux VPS, Vercel, Git, GitHub Actions

EXPERIENCE

MDS Pro Solutions - Full Stack Developer (Contract) | Feb 2026 - Present

- Sole engineer on the timekeeping, payroll and billing platform (TypeScript, Fastify, Supabase/Postgres) used every workday by 15 people across a Philippine team and a US owner.
- Synced billing into the owners' Google Sheet through the Sheets API, filling only blank cells and reporting mismatches instead of overwriting typed figures; Apps Script reporting panels beside it.
- Built an AI assistant on the Claude API with two tools: database queries through a read-only account with a row cap, and Google Sheet reads, with the cost of every question recorded.
- Built the admin dashboard with live staff status and a monthly financial view that is checked against the raw entries, so reports cannot drift from the source data.
- Made the 8-minute onboarding video that walks new staff through the platform, published with a written guide; nightly encrypted off-site backups.
- Closed a database access hole that let any signed-in user read colleagues' billed rates, on a path the API's admin check never saw.

Independent Software Developer | 2021 - Present

- Build and maintain automations and AI tools end to end: mapping, build, testing, monitoring and documentation. Live demos: https://kimlj.dev/hub.

PROJECTS

Jobsift - Automated Data Pipeline | Python, n8n, Google Sheets

- Started as an n8n workflow and rebuilt in Python when it hit its limits; pulls from APIs and email alerts, filters, scores with an AI model, archives to Google Sheets and alerts on Telegram.
- Traced a five-day silent failure to an AI provider running out of credits; found an API token in the logs, rotated it and stopped the logging that leaked it.

Shift Ops Console - Automation Across n8n, Make and Zapier | simulated data

- Alerts for a simulated 100-person workforce, routed by severity through n8n, Make and Zapier into Slack and a daily digest; measured the Make cost at about 4 operations a run.

Cockpit - AI Agent Workflow with Human Review | Not public yet

- Built on DeepSeek Harness: one agent builds, automated tests check, a second read-only agent reviews, then I approve. Live walkthrough and commit history available; film at kimlj.dev/cockpit made by Claude Code.

EDUCATION

- Bachelor of Science in Information Technology, AMA Computer College Makati (3 of 4 years completed)
