KIM JULONGBAYAN

Software Developer | Playwright, API Testing & Regression Testing
Quezon City, Metro Manila, Philippines | kljulongbayan@gmail.com | +63 961 529 9305
Portfolio: kimlj.dev | GitHub: github.com/kimlj | LinkedIn: linkedin.com/in/kimjulongbayan

PROFESSIONAL SUMMARY

- Full Stack Developer with 5+ years building software, with hands-on regression testing, production troubleshooting and web/mobile release ownership.
- Built CI-gated browser tests and maintained a healthcare platform used daily by 15 people. Live product demos: kimlj.dev/hub

TESTING & TECHNICAL SKILLS

- Playwright, browser test isolation, regression tests, bug reproduction | JavaScript, TypeScript, Python | REST APIs, PostgreSQL, Supabase, SQLite
- React, Node.js, Fastify, Chrome MV3 | Git, GitHub Actions, Docker, Linux VPS | Capacitor, iOS/Android releases, Sentry, Android emulator tooling

EXPERIENCE

MDS Pro Solutions - Full Stack Developer (Contract) | Feb 2026 - Present

- Sole engineer on the TypeScript/Postgres timekeeping and billing platform used every workday by 15 people across a Philippine team and US owner.
- Traced a database API permissions hole exposing confidential billing rates; restricted reads at the database level where the API admin guard did not apply.
- Built server-stamped, append-only time records and attributed corrections; payroll and invoice exports share one calculation to agree to the cent.
- Fixed missing staff in billing by connecting dashboard invitations to sheet roster updates, stable IDs and scheduled reconciliation.

TESTING & RELEASE PROJECTS

WordWarz.io - Browser Regression Testing and Mobile Releases

- Built the first Playwright suite: a real multiplayer match across two isolated browser contexts, running against a release build and fresh SQLite data.
- Added distinct-player assertions and production-traffic guards; tests fail when identities collide or the client reaches live services.
- Pinned phone, tablet and desktop layout selection with explicit device settings; documented gaps in native, visual and cross-browser coverage.
- Integrated browser tests into GitHub Actions beside server tests; shipped the React/Capacitor product on web, the App Store and Google Play.
- Built Android emulator tooling for install, launch, screenshots and device logs; used Sentry monitoring across the client and server.

Jobsift - Integration and Adversarial Checks

- Checked the URL fetcher against 23 hostile URLs and the posting pipeline against six injection inputs; blocked private/internal addresses.
- Diagnosed stopped email extraction from server logs and restored it by changing the AI provider; added duplicate handling across job sources.

Shift Ops Console - Test Fixtures and Measurement

- Tested rules against planted anomalies in a simulated 100-person workforce; caught 359 of 370 and corrected a scorer that overstated false positives.

OPEN SOURCE & BUG DIAGNOSIS

- Merged fixes and tests into recharts and mastra, each with over 27,000 GitHub stars; reviewed by maintainers, including chart visual regressions and API retries.
- Diagnosed a Windows process-launch bug in Codex; supplied a reproducible trace and verified the shipped fix with zero unwanted windows in 20 launches.

EDUCATION

- BS Information Technology coursework, AMA Computer College Makati: 3 of 4 years completed; degree not conferred.
