

KIM JULONGBAYAN

Automation and Systems Developer | Integrations, Google Sheets, n8n, Make
Quezon City, Metro Manila, Philippines | kljulongbayan@gmail.com | +63 961 529 9305
Portfolio: kimlj.dev | GitHub: github.com/kimlj | LinkedIn: linkedin.com/in/kimjulongbayan

PROFESSIONAL SUMMARY

- Sole engineer on the timekeeping, payroll and billing system a US nurse staffing company runs on every workday, including the scheduled sync into the owners' Google Sheet.
- I build the links between tools, then own them when they break - reading the logs, finding the real cause, and changing the design so the same break cannot come back.
- Daily user of Claude Code and ChatGPT. Careful with data - the production system holds patient information.

TECHNICAL SKILLS

- Automation: n8n, Make, Zapier, Power Automate, Google Apps Script, Google Sheets API, Slack alerts, webhooks and REST APIs, scheduled jobs
- Systems: TypeScript, JavaScript, Python | Node.js, Fastify | PostgreSQL, Supabase | React | Chrome extensions
- Operations: Linux server, Docker, GitHub Actions, Vercel, logs and monitoring, written runbooks

EXPERIENCE

MDS Pro Solutions - Full Stack Developer (Contract) | Feb 2026 - Present

- Built the weekly sync from the platform into the owners' Google Sheet - it fills only blank cells and reports mismatches rather than overwriting typed figures, and unattended runs touch only the fortnight that just closed.
- Locked the sheet columns both syncs match on, so a stray edit cannot silently detach a nurse's figures, while the admin still types freely everywhere else.
- Sole engineer on the platform used every workday by 15 people: server-stamped clock-ins nobody can edit, append-only records, and every correction approved and attributed.
- Timesheet, payroll and client-invoice workbooks generated from one shared pay calculation, so every report agrees to the cent.
- Website lead routing: a facility booking goes to the sales inbox, a nurse application goes to HR, each validated and confirmed by email.
- An Ask AI assistant for the owners that answers questions from the database and the sheet, read-only, with per-question cost tracking; nightly encrypted off-site backups.

Independent Full Stack Developer | 2018 - Present

- Built and ran REST APIs, real-time systems and scheduled services on a self-managed Linux server.

PROJECTS

Shift Ops Console - Multi-Platform Automation Demonstrator

- Compliance alerts for a simulated 100-person workforce, split by fit: n8n rules engine, Make digest and severity routing, Zapier urgent Slack alerts, Power Automate approvals.
- Measured its own detector - 359 of 370 planted problems caught - then found its scorer was wrong and rebuilt it, cutting false alarms from 9% to 1.0%.

Jobsift - Self-Hosted Job Alert Pipeline

- Rebuilt an n8n workflow (Gmail, AI scoring, Google Sheets, Telegram) as a service that runs 24/7 on a Linux server.
- Traced a silent five-day stop in the server log to AI credits running out, and moved the pipeline to another provider.

WordWarz.io - Real-Time Multiplayer Word Game

- Web and native iOS game; 570 players have reached a game since launch across 1,045 matches, with 40 to 70 playing on a given day, grown by word of mouth.

OPEN SOURCE CONTRIBUTIONS

- mastra, an AI agent framework with over 28,000 GitHub stars: fixed agent retries that ignored a provider's "try again in N seconds", reproduced and proven before and after.
- recharts, a charting library with over 27,000 GitHub stars: 4 merged changes, each reviewed by a maintainer.

EDUCATION

- Bachelor of Science in Information Technology - AMA Computer College Makati (3 of 4 years completed)
