

KIM JULONGBAYAN

AI Product Builder | UI/UX | Claude Code

Quezon City, Metro Manila, Philippines | kljulongbayan@gmail.com | +63 961 529 9305

Portfolio: kimlj.dev | GitHub: github.com/kimlj | LinkedIn: linkedin.com/in/kimjulongbayan

PROFESSIONAL SUMMARY

- Builds AI-powered products end to end, alone, from the first screen to the store release. Sole engineer on a production platform 15 people use every workday, and on a game live on the web, the App Store and Google Play.
- 834 hours and 17,512 prompts in Claude Code across 48 projects (168 active days, as of Sep 2026), counted from session transcripts and published at kimlj.dev.

TECHNICAL SKILLS

- Product and UI: phone, tablet and desktop layouts, light and dark themes, reduced-motion support, React, Tailwind CSS, Capacitor (iOS and Android), React Native and Expo
- AI coding tools: Claude Code, Codex, OpenCode | AI inside products: Claude API, OpenAI, DeepSeek, prompt engineering, cost tracking per question
- Generative AI: ComfyUI, Stable Diffusion, IPAdapter, ControlNet, batch asset pipelines
- Back end and data: TypeScript, JavaScript, Python, Node.js, Fastify, Socket.IO | PostgreSQL, Supabase, SQLite
- Shipping: Docker, Linux VPS, Vercel, GitHub Actions, Codemagic, App Store and Google Play releases, Playwright

EXPERIENCE

MDS Pro Solutions - Full Stack Developer (Contract) | Feb 2026 - Present

- Sole engineer on the internal timekeeping and billing platform (TypeScript, Fastify, Supabase/Postgres) used every workday by 15 people: a nursing team working remotely across the Philippines, and the owner in the US.
- Designed and built the admin dashboard (seven screens, with each nurse's status updating live) and the Chrome side panel the nurses clock in and out from, published on the Chrome Web Store.
- Shipped Ask AI on the Claude API: an admin asks a question in plain English, the model writes the database query, a read-only account runs it, and every answer records its own cost.
- Replaced an editable payroll spreadsheet: clock-ins are stamped by the server, records are never overwritten, and every correction goes through an approved, named trail.

Independent AI and Automation Developer | 2018 - Present

- Built and shipped AI-integrated web, mobile and automation products end to end: design, development, deployment, and maintenance.

PROJECTS

kimlj.dev and Live Hub - Portfolio | HTML, CSS, JavaScript

- Designed and hand-built with no template or framework: light and dark themes, motion that switches off for visitors who ask for less, and phone layouts reworked section by section. kimlj.dev/hub shows each product live.
- Opens on a one-minute film made in JavaScript alone: 2,191 particles re-forming into each project's story, with music generated in the browser, and every figure read from the page so the two never disagree.

WordWarz.io - Real-Time Multiplayer Word Game | React, Capacitor, Socket.IO

- Took it from an idea (Wordle as a live race, joinable from a link on any phone) to the browser, the App Store and Google Play, designed and built alone: 570 players across 1,045 matches since launch, 40 to 70 on a given day.
- Separate phone, tablet and desktop layouts checked by its own Playwright suite in CI. AI bots at five skill levels keep every lobby full, and 60+ avatars came from custom ComfyUI pipelines.

Cockpit - Agentic AI Development Workflow | Node.js, React, DeepSeek Harness

- Claude Code, Codex and OpenCode side by side as real terminals in one window. Each task runs one loop: an agent builds, tests check it with no AI, a read-only agent reviews, then I approve and it is saved in git.

Jobsift - Self-Hosted Job Alert and Scoring Pipeline | Python

- Started as an n8n workflow and rebuilt in Python when it hit its limits. Reads job boards and email alerts, drops misfits before any AI call, scores the rest and sends the best to Telegram, 24/7 on a Linux server.

EDUCATION

- Bachelor of Science in Information Technology, AMA Computer College Makati (3 of 4 years completed)
