KIM JULONGBAYAN

AI Automation Developer | Claude API, Python | Google Sheets and Gmail

Quezon City, Metro Manila, Philippines | kljulongbayan@gmail.com | +63 961 529 9305
Portfolio: kimlj.dev | GitHub: github.com/kimlj | LinkedIn: linkedin.com/in/kimjulongbayan

PROFESSIONAL SUMMARY

- Developer with 5+ years building software and 1-2 years writing code that calls the Claude and OpenAI APIs. Sole engineer on a production platform 15 people use every workday, payroll and invoices included.

TECHNICAL SKILLS

- AI: Claude API (Anthropic SDK), OpenAI API, DeepSeek, tool use, structured extraction, verification passes, prompt-injection testing, per-question cost tracking
- Languages: Python, TypeScript, JavaScript
- Scraping and parsing: job board APIs, HTML parsing, email alerts over IMAP, Playwright, site crawling
- Sheets and data: Google Sheets API, Google Apps Script, ExcelJS workbooks, PostgreSQL, Supabase, SQLite
- Automation: n8n, Make, Zapier, Power Automate, Gmail, Telegram, scheduled jobs, Docker, Linux VPS

EXPERIENCE

MDS Pro Solutions - Full Stack Developer (Contract) | Feb 2026 - Present

- Sole engineer on the timekeeping and billing platform (TypeScript, Fastify, Supabase/Postgres, Chrome MV3 extension) used every workday by 15 people: nurses and staff across the Philippines, and the owner in the US.
- Built a billing sync into the owner's Google Sheet that fills only blank cells and reports mismatches rather than overwriting typed figures, plus Apps Script reporting panels.
- Built a monthly financial view across two companies in Apps Script (profit, cash, money owed, expenses) with a check that recalculates every month from raw entries and reconciles it with the pay periods.
- Built an AI agent on the Claude API that answers pay and billing questions with two tools: SQL through a read-only Postgres account under a 500-row cap, and a Google Sheets reader.
- Generated timesheet, payroll and client-invoice Excel workbooks from one shared pay calculation, so every surface agrees to the cent.

Independent AI and Automation Developer | 2021 - Present

- Built and shipped AI-integrated web, mobile and automation systems end to end: architecture, development, deployment, and maintenance.

PROJECTS

Jobsift - Self-Hosted Job Pipeline | Python, github.com/kimlj/jobsift

- Reads job boards' own APIs and email alerts, with HTML parsing only as a last resort; the model pulls each listing into fixed fields, and obvious misfits are dropped before any AI call. Rows go to a Google Sheet.
- Extraction and verification are split so one checks the other; tested against six prompt-injection postings and 23 hostile links. Runs 24/7 on an Ubuntu server.

MDS Pro Solutions Website - Claude Chat Assistant | Claude API, live

- Answers prospective clients and nurses from a hand-written knowledge file, given no tools on purpose; hands unanswered questions to HR by email, with rate limits and an hourly spend cap.

RecodeAI - AI Website Redesigner | Claude API, recode.kimlj.dev

- Crawls a site, has Claude analyze its brand, generates a redesign and deploys it to a live URL, streamed live to the browser.

Cockpit - Agent Development Control Plane | Claude Code, Codex

- One agent builds, tests check with no AI involved, a read-only reviewer agent sends problems back, then I approve. Film made by Claude Code: kimlj.dev/cockpit.

EDUCATION

- Bachelor of Science in Information Technology, AMA Computer College Makati (3 of 4 years completed)
