

KIM JULONGBAYAN

Full Stack Developer | React, React Native, Node.js | Healthcare SaaS
Quezon City, Metro Manila, Philippines | kljulongbayan@gmail.com | +63 961 529 9305
Portfolio: kimlj.dev | GitHub: github.com/kimlj | LinkedIn: linkedin.com/in/kimjulongbayan

PROFESSIONAL SUMMARY

- Full Stack Developer with 5+ years building web and mobile products end to end. Sole engineer on a production healthcare platform a US nursing company runs every workday, patient data included.
- Shipped a native iOS app to the App Store from a React codebase; React Native and Expo on a fitness app with Apple HealthKit.

TECHNICAL SKILLS

- Front end and mobile: React, React Native, Expo, Capacitor (iOS, Android), Next.js, Tailwind CSS, Zustand, Chrome MV3
- Back end and data: Node.js, Express, Fastify, Socket.IO, REST APIs, WebSockets | PostgreSQL, Supabase, SQLite, SQL migrations
- Auth and security: role-based access, JWT verification on the server, Postgres row-level security, append-only audit records
- DevOps: Git, GitHub, GitHub Actions, Codemagic (App Store builds), Docker, Linux VPS, Nginx, Vercel, Google Cloud | Playwright | Claude API, OpenAI API

EXPERIENCE

MDS Pro Solutions - Full Stack Developer (Contract) | Feb 2026 - Present

- Sole engineer on the timekeeping, payroll and billing platform a US nursing company runs every workday, 15 users: Postgres schema, API (TypeScript, Fastify, Supabase), admin dashboard, and the Chrome extension nurses clock in with.
- Handles patient information in production (resident names, medications, insurance details) behind row-level security, 35 policies over 45 migrations, append-only records and nightly encrypted off-site backups.
- Enforced roles in the database, closing a gap where any signed-in nurse could read every colleague's billed rate on a path the API's admin check never saw.
- Admin dashboard with live nurse status over Postgres realtime; payroll and invoice workbooks built from one shared pay calculation, so every screen agrees to the cent.
- Plain-English questions over the production database on the Claude API, through a read-only Postgres role with per-question cost tracking.

Independent Full Stack Developer | 2018 - Present

- Built REST APIs and real-time systems; optimized database queries and backend performance.

PROJECTS

WordWarz.io - Real-Time Multiplayer Web and iOS Game | React, Capacitor, Node.js, Express, Socket.IO

- Live in the browser and on the iOS App Store (Word Warz Royale), Android in review; 570 players across 1,045 matches since launch, with 40 to 70 playing on a given day, by word of mouth.
- Store builds through Codemagic, GitHub Actions CI, a Dockerized Node server with Sentry, and a Playwright suite that plays a real match across two browsers.
- AI bots with ELO matchmaking across five tiers and difficulty that adapts to the player.

DailyLoad - Fitness App (in development) | React Native, Expo

- React Native app on Expo with React Navigation, Reanimated, Zustand and Apple HealthKit.

Casinore.io - Web App with Wallet Sign-In | React, Vite, Express

- React front end on Privy sign-in, over an Express and WebSocket backend that verifies every token on the server.

OPEN SOURCE CONTRIBUTIONS

- recharts, a charting library with over 27,000 GitHub stars (3 merged, 2026): XAxis height="auto" sizing, a connectNulls bug across stacked series, and a redundant CartesianAxis dispatch. Each reviewed by a maintainer before landing.
- mastra, an AI agent framework with over 27,000 GitHub stars (1 merged, 2026): agent model-call retries now honor Retry-After instead of retrying straight back into a rate-limited provider.

EDUCATION

- Bachelor of Science in Information Technology - AMA Computer College Makati (3 of 4 years completed)
