KIM JULONGBAYAN

AI Engineer | Agentic Workflows | Client Portals

Quezon City, Metro Manila, Philippines | kljulongbayan@gmail.com | +63 961 529 9305

Portfolio: kimlj.dev | GitHub: github.com/kimlj | LinkedIn: linkedin.com/in/kimjulongbayan

PROFESSIONAL SUMMARY

- Developer with 5+ years building software and 1-2 years with frontier models daily. Sole engineer on a production portal 15 people use every workday, with an AI agent that answers from its live data.
- 772 hours and 16,252 prompts in Claude Code across 43 projects (149 active days, as of Sep 2026), counted from session transcripts and published at kimlj.dev.

TECHNICAL SKILLS

- AI: Claude API, Claude Code, Codex, DeepSeek, OpenAI, tool-using agents, MCP servers, prompt engineering, evaluation against planted test cases, per-question cost tracking
- Web and APIs: TypeScript, Python, React, Next.js, Fastify, Node.js, REST, webhooks, Chrome MV3 extensions
- Data: PostgreSQL, Supabase, row-level security, SQLite, Google Sheets API, Google Apps Script
- Automation: n8n, Make, Zapier, Power Automate, Gmail and IMAP, scheduled jobs
- Testing and delivery: Git, Playwright, GitHub Actions CI/CD, Codemagic, Docker, Linux VPS, Nginx, Vercel

EXPERIENCE

MDS Pro Solutions - Full Stack Developer (Contract) | Feb 2026 - Present

- Sole engineer on the timekeeping and billing portal (TypeScript, Fastify, Supabase/Postgres, Chrome MV3 extension) that 15 people log in to every workday: nurses and staff across the Philippines, and the owner in the US.
- Built an AI agent on the Claude API with two tools: SQL against a read-only Postgres role in a read-only transaction under a 500-row cap, and a Google Sheets reader, with the cost of every question recorded.
- Gave the public site's Claude assistant no tools on purpose, so a jailbreak can only produce a wrong sentence; guarded by rate limits, capped lengths and an hourly spend cap.
- Built a monthly financial view across two companies (profit, cash, money owed, expenses) with a check that recomputes every month from raw entries and reconciles it with the pay periods and the dashboard.
- Punches are stamped by Postgres, records are append-only, and every correction flows through an approved, attributed trail under row-level security.

Independent AI and Automation Developer | 2021 - Present

- Built and shipped AI-integrated web, mobile and automation systems end to end: architecture, development, deployment, and maintenance.

PROJECTS

Cockpit - Agent Development Control Plane | DeepSeek Harness, Claude Code, Codex

- One agent builds, tests check with no AI involved, a read-only reviewer agent sends problems back, then I approve and a git checkpoint is saved. Film made by Claude Code: kimlj.dev/cockpit.

Jarvis - MCP Server over Personal Data | Python, FastMCP

- MCP server with four tools that split a plain question across three self-hosted stores (photo vector search, 2.6M location points, hybrid search over notes) and join the answers; used daily from Claude Code.

Jobsift - Self-Hosted Job Pipeline | Python

- Rebuilt from an n8n workflow into Python when it hit its limits. Drafting is split into an extractor, a drafter and a per-claim verifier that never sees the posting, attacked with six prompt-injection postings before going live.

WordWarz.io - Real-Time Multiplayer Word Game | React, Node.js, Socket.IO

- Live on the web, the App Store and Google Play: 570 players across 1,045 matches, 40 to 70 on a given day. A Playwright suite plays a real two-browser match in GitHub Actions on every pull request.

Open Source | Merged upstream

- Mastra (28,900+ stars): agent model-call retries now honor Retry-After. Four merged pull requests to recharts (27,000+ stars), reviewed by its maintainer.

EDUCATION

- Bachelor of Science in Information Technology, AMA Computer College Makati (3 of 4 years completed)
