

KIM JULONGBAYAN

AI Automation Developer | n8n | AI Agents | Claude Code Daily
Quezon City, Metro Manila, Philippines | kljulongbayan@gmail.com | +63 961 529 9305
Portfolio: kimlj.dev | GitHub: github.com/kimlj | LinkedIn: linkedin.com/in/kimjulongbayan

PROFESSIONAL SUMMARY

- AI and automation developer with 5+ years building software end to end and 3+ years on LLM integration, AI agents and automated workflows. Sole engineer on a production platform 15 people use every workday.
- 772 hours and 16,252 prompts in Claude Code across 43 projects (149 active days, as of Sep 2026), counted from session transcripts and published at kimlj.dev.

TECHNICAL SKILLS

- Automation and integration: n8n (JavaScript Code nodes), Google Apps Script, Google Sheets API, Gmail, Telegram Bot API, REST APIs, webhooks, JSON, scheduled jobs
- AI agents and LLMs: Claude API, OpenAI, DeepSeek, tool-using agents, MCP servers (Python), structured output validation, per-question cost tracking
- AI coding tools: Claude Code (daily), Codex, OpenCode
- Languages and data: JavaScript, TypeScript, Python | PostgreSQL, Supabase, SQLite | Git, GitHub Actions
- Infrastructure: Docker, Linux VPS, Nginx, Vercel

EXPERIENCE

MDS Pro Solutions - Full Stack Developer (Contract) | Feb 2026 - Present

- Sole engineer on the internal timekeeping and billing platform (TypeScript, Fastify, Supabase/Postgres, Chrome MV3 extension) used every workday by 15 people: a nursing team working remotely across the Philippines, and the owner in the US.
- Built an AI agent on the Claude API with two tools, a database query and a Google Sheet reader: it runs under a read-only database account with a 500-row cap, and logs the cost of every question.
- Automated client billing into the owner's Google Sheet via the Sheets API: a scheduled sync fills only blank cells and reports mismatches rather than overwriting typed figures, so the figures the client typed survive.
- Generated timesheet, payroll and client-invoice Excel workbooks with ExcelJS from one shared pay calculation, so every surface agrees to the cent.
- Replaced an editable payroll spreadsheet: punches are stamped by Postgres, records are append-only, and every correction flows through an approved, attributed trail under row-level security.

Independent AI and Automation Developer | 2018 - Present

- Built and shipped AI-integrated web, mobile and automation systems end to end: architecture, development, deployment, and maintenance.

PROJECTS

Shift Ops Console - n8n Rules Engine | n8n, JavaScript

- Checks every shift against the labor rules of the country the person works in, for a simulated 100-person workforce across 9 timezones: 426 lines of hand-written JavaScript, built into an n8n Code node by script so it lives in Git.
- Tested against 370 planted problems: caught 359 (97.0%). Safe to re-run, since problems already raised are skipped. Found its own scorer was wrong and rebuilt it, cutting false alarms from 9% to 1.0%.

Jobsift - Self-Hosted Job Alert and Scoring Pipeline | Python

- Rewrote an n8n workflow as a self-hosted Python service once it outgrew the platform: job boards' own APIs first, email alerts for the gated boards, running unattended on a Linux server.
- Hard filters run before any AI call, so a rejected job never costs one. SQLite store, Google Sheets archive, Telegram alerts.

Jarvis - Personal MCP Server | Python, MCP

- MCP server with four tools that Claude Code calls every day, joining three self-hosted data stores over REST: about 40,000 photos, 2.6 million location points and 231,000 messages.

WordWarz.io - Real-Time Multiplayer Game | React, Node.js, Socket.IO

- Shipped to the browser and the App Store: 570 players have reached a game across 1,045 multiplayer matches, 40-70 playing daily, grown by word of mouth alone.

EDUCATION

- Bachelor of Science in Information Technology, AMA Computer College Makati (3 of 4 years completed)
