

KIM JULONGBAYAN

Business Automation Analyst | Python, SQL, Excel Reporting | AI Workflows | n8n, Make, Zapier

Quezon City, Metro Manila, Philippines | kljulongbayan@gmail.com | +63 961 529 9305

Portfolio: kimlj.dev | GitHub: github.com/kimlj | LinkedIn: linkedin.com/in/kimjulongbayan

PROFESSIONAL SUMMARY

- Automation developer with 5+ years building software end to end and 3+ years connecting AI to real business data and workflows. Sole engineer on a production operations platform 15 people use every workday.
- 772 hours and 16,252 prompts in Claude Code across 43 projects (149 active days, as of Sep 2026), counted from session transcripts and published at kimlj.dev.

TECHNICAL SKILLS

- Automation: Python, n8n, Make, Zapier, Power Automate, Google Apps Script, scheduled jobs, webhooks, REST API integration
- Data and reporting: SQL (PostgreSQL, SQLite), Excel workbooks with ExcelJS, Google Sheets API, Looker Studio dashboards, data cleanup and deduplication
- AI workflows: Anthropic Claude API, OpenAI GPT-4o, DeepSeek, Claude Code, LLMs connected to databases and Google Sheets, per-question cost tracking
- Languages and infrastructure: Python, TypeScript, JavaScript | Supabase, Docker, Linux VPS, systemd, Git, GitHub Actions

EXPERIENCE

MDS Pro Solutions - Full Stack Developer (Contract) | Feb 2026 - Present

- Sole engineer on the timekeeping, payroll and billing platform (TypeScript, Supabase/Postgres, Chrome extension) 15 people use every workday, from remote nurses in the Philippines to the US owner.
- Automated client billing into the owner's Google Sheet: a scheduled sync fills only blank cells and reports mismatches rather than overwriting typed figures, with the rules documented for the next maintainer.
- Generated timesheet, payroll and client-invoice Excel workbooks with ExcelJS from one shared pay calculation, so every report agrees to the cent.
- Built Ask AI on the Anthropic SDK: Claude answers plain-English questions with read-only SQL against the database and a read of the owner's Google Sheet, with every answer's cost recorded.
- Replaced an editable payroll spreadsheet: clock-ins are stamped by the database, records are append-only, and every correction goes through an approved, attributed trail.

Independent AI and Automation Developer | 2018 - Present

- Built and shipped AI-integrated web, mobile and automation systems end to end: architecture, development, deployment, and maintenance.

PROJECTS

Jobsift - Self-Hosted Job Lead Pipeline | Python, SQL, n8n, LLM APIs

- Rebuilt an n8n workflow (Gmail, GPT-4o scoring, Sheets, Telegram) in Python once it outgrew the platform: job boards' own APIs first, email alerts for gated boards, obvious misfits dropped before any AI call.
- Merges the same job across boards even when the company is written differently, and runs 24/7 on a Linux server. Traced a silent five-day stop to the AI provider's credits running out.

Shift Ops Console - Six-Platform Automation Pipeline | n8n, Make, Zapier, Power Automate

- One schedule-compliance pipeline for a simulated 100-person workforce, split by fit: n8n rules engine, Make digest to Slack, Zapier urgent alerts, Power Automate approvals, Looker Studio dashboards.
- Measured its own detector: 359 of 370 planted anomalies caught, then found its own scorer was wrong and fixed it, cutting the reported false-positive rate from 9% to 1.0%.

WordWarz.io - Real-Time Multiplayer Game | React, Node.js, Socket.IO

- Shipped to the browser, the App Store and Google Play: 570 players have reached a game across 1,045 multiplayer matches, 40-70 playing daily, grown by word of mouth alone.

EDUCATION

- Bachelor of Science in Information Technology, AMA Computer College Makati (3 of 4 years completed)
