

KIM JULONGBAYAN

Automation Specialist | AI Workflows | n8n, Make, Zapier | LLM APIs
Quezon City, Metro Manila, Philippines | kljulongbayan@gmail.com | +63 961 529 9305
Portfolio: kimlj.dev | GitHub: github.com/kimlj | LinkedIn: linkedin.com/in/kimjulongbayan

PROFESSIONAL SUMMARY

- Automation and AI developer with 5+ years building software end to end and 3+ years connecting LLMs to real data and workflows. Sole engineer on a production platform 15 people use every workday.
- 772 hours and 16,252 prompts in Claude Code across 43 projects (149 active days, as of Sep 2026), counted from session transcripts and published at kimlj.dev.

TECHNICAL SKILLS

- AI and LLM: Anthropic Claude API, OpenAI GPT-4o, DeepSeek, structured prompting, tool use, LLMs connected to databases and Google Sheets, per-question cost tracking
- Automation platforms: n8n, Make, Zapier, Power Automate, Google Apps Script, Looker Studio
- Integration: webhooks, REST APIs, Google Sheets API, Gmail and IMAP, Telegram Bot API, Slack, scheduled jobs, data parsing, Chrome MV3 extensions
- Languages and data: Python, TypeScript, JavaScript | PostgreSQL, Supabase, SQLite | ExcelJS reporting
- Infrastructure: Docker, Linux VPS, Nginx, systemd, Vercel, Git, GitHub Actions

EXPERIENCE

MDS Pro Solutions - Full Stack Developer (Contract) | Feb 2026 - Present

- Sole engineer on the timekeeping and billing platform (TypeScript, Fastify, Supabase/Postgres, Chrome extension) 15 people use every workday, from remote nurses in the Philippines to the US owner.
- Built Ask AI on the Anthropic SDK: Claude answers plain-English questions with two tools, read-only SQL against the database and a read of the owner's Google Sheet, with every answer's cost recorded.
- Automated client billing into the owner's Google Sheet: a scheduled sync fills only blank cells and reports mismatches rather than overwriting typed figures, so the figures the client typed survive.
- Generated timesheet, payroll and client-invoice Excel workbooks with ExcelJS from one shared pay calculation, so every surface agrees to the cent.

Independent AI and Automation Developer | 2018 - Present

- Built and shipped AI-integrated web, mobile and automation systems end to end: architecture, development, deployment, and maintenance.

PROJECTS

Jobsift - Self-Hosted Job Alert and Scoring Pipeline | Python, n8n, LLM APIs

- Rebuilt an n8n workflow (Gmail, GPT-4o scoring, Sheets, Telegram) in Python once it outgrew the platform: job boards' own APIs first, email alerts for gated boards, obvious misfits dropped before any AI call.
- Runs 24/7 on a Linux VPS. Traced a silent five-day stop in email extraction to the AI provider's credits running out, and moved the AI calls to DeepSeek.

Shift Ops Console - Six-Platform Automation Pipeline | n8n, Make, Zapier, Power Automate

- One schedule-compliance pipeline for a simulated 100-person workforce, split by fit: n8n rules engine, Make digest and severity routing to Slack, Zapier urgent alerts, Power Automate approvals.
- Found three Make mapping traps that run green and do nothing, and measured its own detector: 359 of 370 planted anomalies caught, then fixed a scorer that had overstated false positives (9% to 1.0%).

Cockpit - Agentic Development Control Plane | DeepSeek Harness, Node.js, React

- Built on DeepSeek Harness, DeepSeek's open-source agent runtime: Claude Code, Codex, OpenCode and Hermes side by side in persistent terminals, each with its own project, account and permissions.
- Delivery loop: a builder agent, automated tests, an independent read-only reviewer with a fixed output format, fixes, then my approval and a git checkpoint.

WordWarz.io - Real-Time Multiplayer Game with AI Bot Engine | React, Node.js, Socket.IO

- Shipped to the browser, the App Store and Google Play: 570 players have reached a game across 1,045 multiplayer matches, 40-70 playing daily, grown by word of mouth alone.

EDUCATION

- Bachelor of Science in Information Technology, AMA Computer College Makati (3 of 4 years completed)
