KIM JULONGBAYAN

AI Automation Specialist | Claude, Google Sheets, Python and JavaScript

Quezon City, Metro Manila, Philippines | kljulongbayan@gmail.com | +63 961 529 9305

Portfolio: kimlj.dev | GitHub: github.com/kimlj | LinkedIn: linkedin.com/in/kimjulongbayan

PROFESSIONAL SUMMARY

- Developer based in the Philippines with 3 years of professional software experience and over a year building AI automations. Works remotely with a US owner and a Philippine team.
- Builds business workflows from process mapping through testing and documentation. Production work includes billing, spreadsheet reporting, lead routing and Claude-powered assistants.

SKILLS

- AI workflows: Claude API, Claude Code, prompt writing, read-only business assistants, separate agent review
- Automation: Google Apps Script, n8n, Make, Zapier, Power Automate, scheduled workflows and API integrations
- Data and scripting: Google Sheets, Python, JavaScript, TypeScript, SQL, Excel reporting

EXPERIENCE

MDS Pro Solutions - Full Stack Developer (Contract) | February 2026 - Present

- Sole developer of the timekeeping and billing platform used every workday by 15 people at a US nursing staffing company, from staff to the owner.
- Built billing sync into the owner's Google Sheet that fills only blank cells and flags mismatches, preserving figures entered by hand.
- Added a Claude-powered assistant that answers questions from business records with read-only database and Sheets access, tracking what each question costs.
- Built Apps Script reporting for monthly profit, cash, expenses and money owed across two companies, with independent checks against the underlying records.
- Generate payroll and invoice workbooks from one shared pay calculation so every document agrees to the cent.
- Routed website booking requests to sales and applications to HR, with validation and automatic confirmation emails.
- Created an eight-minute onboarding video and written guide covering clock-ins, corrections, earnings and pay periods.
- Protect production records with database access rules, attributed corrections and nightly encrypted off-site backups.
- Built a website assistant that answers from a maintained knowledge file and passes unanswered questions to a person by email, with an hourly spending cap.

SELECTED AUTOMATION PROJECTS

Cockpit - AI Workflow Control Plane

- Built on DeepSeek Harness. Claude Code or Codex builds, automated checks run, a separate agent reviews, and I approve the result before a git checkpoint is saved.
- Not public yet; live walkthrough and commit history available. Claude Code made the short video at kimlj.dev/cockpit.

Jobsift - Automated Pipeline Tracker

- Built first in n8n, then Python. Reads job boards and email alerts, removes duplicates, tracks stages in Google Sheets and sends Telegram alerts. Runs 24/7 on a server.
- Filters unsuitable records before spending on AI, and separates extraction, drafting and claim verification so the draft gets an independent check.
- Documented backup and rollback steps; a checksum check refuses incomplete database transfers before they can replace a good copy.

Shift Ops Console - Cross-Platform Workflow Demonstrator

- Built on simulated workforce data with n8n rules, Make digests, Zapier alerts and Power Automate approvals, alongside Google Sheets and Looker Studio.
- Kept work rules in a Google Sheet so adding a jurisdiction means adding a row, and checked the rules against fixtures before importing the workflow.

EDUCATION AND DEMOS

- BS Information Technology, AMA Computer College Makati: 3 of 4 years completed; degree not conferred.
- Interactive demos: https://kimlj.dev/hub | GitHub: https://github.com/kimlj
