

KIM JULONGBAYAN

AI Automation Developer | AI Agents, MCP, Power Automate | Inbox Triage and Workflow Automation

Quezon City, Metro Manila, Philippines | kljulongbayan@gmail.com | +63 961 529 9305

Portfolio: kimlj.dev | GitHub: github.com/kimlj | LinkedIn: linkedin.com/in/kimjulongbayan

PROFESSIONAL SUMMARY

- AI and automation developer who builds AI agents and workflow automation people rely on daily. Sole engineer on a production platform 15 people use every workday, remote with a Philippine team and a US owner.
- Hands-on with AI agents (tool use), MCP, webhooks, REST APIs and six automation platforms including Power Automate. Claude Code daily: 772 hours across 43 projects (as of Sep 2026).

TECHNICAL SKILLS

- AI agents: Claude API (tool use, multi-turn), OpenAI API, DeepSeek, prompt design, MCP server authoring, Claude Code
- Automation: Power Automate (Desktop flows), n8n, Make, Zapier, Google Apps Script, webhooks, REST APIs, scheduled jobs
- Inbox and alerts: Gmail and IMAP processing, AI extraction and scoring, Telegram and Slack alerts, severity routing and escalation
- Reporting and data: Excel workbooks (ExcelJS), Looker Studio dashboards, Google Sheets API, PostgreSQL, Supabase, SQLite
- Languages and infrastructure: Python, TypeScript, JavaScript, SQL | Docker, Linux VPS, Git

EXPERIENCE

MDS Pro Solutions - Full Stack Developer (Contract) | Feb 2026 - Present

- Sole engineer on the timekeeping and billing platform used every workday by 15 people: a nursing team working remotely across the Philippines, and the owner in the US.
- Built "Ask AI", an agent on the Anthropic SDK with two tools, one that queries the database and one that reads Google Sheets, so the owner asks in plain English and gets real numbers back.
- Set the rules for what the agent can touch: a read-only database role, a read-only transaction, a 500-row cap, and cost tracked on every question.
- Replaced an editable Google Sheet with server-stamped clock-ins, append-only records and approved, named corrections, so every change to someone's hours is visible and accountable.
- Generated timesheet, payroll and client-invoice Excel workbooks from one shared pay calculation, so every report agrees to the cent.
- A scheduled sync fills the owner's Google Sheet and reports mismatches instead of overwriting typed figures.

Independent AI and Automation Developer | 2021 - Present

- Built and shipped AI and automation systems end to end, from design through deployment and maintenance.

PROJECTS

Jobsift - AI Inbox Triage and Alert Pipeline | Python

- Reads alert emails over IMAP, has an AI pull out and score each item, logs everything to Google Sheets and sends only the strongest to Telegram. Runs unattended on a server.

Shift Ops Console - Exception Escalation Across Six Platforms | Simulated data

- For a simulated 100-person workforce: n8n rules engine, Make severity routing, Power Automate Desktop manager approvals, Zapier urgent Slack alerts, Looker Studio dashboards.
- Measured it: 359 of 370 planted problems caught (97.0%), then fixed its own scorer, cutting the false-positive rate from 9% to 1.0%.

Jarvis - Personal AI Assistant | Python, MCP

- Python MCP server that connects an AI assistant to three separate services over REST and joins their answers, used daily from Claude Code.

EDUCATION

- Bachelor of Science in Information Technology, AMA Computer College Makati (3 of 4 years completed)
