

KIM JULONGBAYAN

Full Stack Developer | TypeScript, Node.js, React, Next.js | PostgreSQL
Quezon City, Metro Manila, Philippines | kljulongbayan@gmail.com | +63 961 529 9305
Portfolio: kimlj.dev | GitHub: github.com/kimlj | LinkedIn: linkedin.com/in/kimjulongbayan

PROFESSIONAL SUMMARY

- Sole engineer on the production platform a US staffing company runs on every workday, from the PostgreSQL schema to the front end. Every push to main deploys through GitHub Actions.
- 834 hours in Claude Code across 48 projects (as of Sep 2026), published at kimlj.dev, with review and tests before anything ships.

TECHNICAL SKILLS

- Languages and front end: TypeScript, JavaScript, Python | React, Next.js, Tailwind CSS, Chrome MV3 extensions
- Back end and data: Node.js, Fastify, Express, FastAPI | PostgreSQL, Supabase, row-level security, SQLite | SQL migrations and data modeling
- Integrations: REST APIs, webhooks, Google Sheets API with a service account, Gmail over IMAP, Telegram Bot API, scheduled sync jobs
- AI: Claude API, OpenAI, DeepSeek | tool use, structured output, prompt-injection testing, per-question cost tracking
- Automation and infrastructure: n8n, Make, Zapier, Apps Script | Docker, Linux VPS, systemd, Nginx, GitHub Actions, Vercel

EXPERIENCE

MDS Pro Solutions - Full Stack Developer (Contract) | Feb 2026 - Present

- Sole engineer on the timekeeping, payroll and billing platform (TypeScript, Fastify, Supabase/Postgres, Chrome MV3) used every workday by 15 people, the nurses and staff to the owner in the US.
- {"Weekly sync into the owners' Google Sheet": 'fills only blank cells and reports mismatches, since the sheet can hold figures the system never saw.'}
- Ask AI assistant on the Anthropic SDK with two tools: SQL through a read-only Postgres role capped at 500 rows, and a Sheets reader, with the cost of every question recorded.
- Closed a row-level-security hole that let any signed-in nurse read colleagues' billed rates straight from the database, on a path the API server's admin check never saw.
- Append-only, server-stamped time records with attributed corrections, and nightly encrypted off-site backups.

Independent Full Stack Developer | 2018 - Present

- Built and shipped web, mobile and automation systems end to end: architecture, development, deployment and maintenance.

PROJECTS

Jobsift - Self-Hosted Job Alert Pipeline | Python

- Measured why job boards block automation (server IP addresses, headless-browser fingerprints), so boards that refuse servers are read from a home laptop that hands listings to the server.
- Link fetcher that refuses private and internal addresses, tested with 23 hostile URLs; posting text treated as untrusted and tested with six injection postings.
- Traced a silent five-day stop in the server log to AI credits running out, then moved every AI call to another provider.

WordWarz.io - Real-Time Multiplayer Word Game | React, Node.js, Socket.IO

- Web and native iOS game: 570 players have reached a game across 1,045 multiplayer matches, with 40 to 70 playing daily, grown by word of mouth.
- My own Playwright suite boots the game server, plays a real match across two browser sessions, and checks the phone, tablet and desktop layouts.

OPEN SOURCE

- recharts, a charting library with over 27,000 GitHub stars (4 merged, including Chromium, Firefox and WebKit screenshot baselines) and mastra, 28,000 stars (1 merged). Each reviewed by a maintainer.
- Diagnosed the root cause of a Windows bug in OpenAI's Codex CLI (127,000+ stars), a file-and-line trace the maintainer credited for reproducing it.

EDUCATION

- Bachelor of Science in Information Technology, AMA Computer College Makati (3 of 4 years completed)
