KIM JULONGBAYAN

Node.js Developer | Production Debugging | PostgreSQL | AI-Assisted Development

Quezon City, Metro Manila, Philippines | kljulongbayan@gmail.com | +63 961 529 9305

Portfolio: kimlj.dev | GitHub: github.com/kimlj | LinkedIn: linkedin.com/in/kimjulongbayan

PROFESSIONAL SUMMARY

- Developer with 5+ years of on-and-off experience in JavaScript and Node.js, and 1-2 years with Claude Code and Codex. Only engineer on two production systems in daily use.
- Finds the root cause before patching: traced a Windows bug in OpenAI's Codex CLI (127,000+ stars) to two lines of its source, and has five pull requests merged into recharts and mastra (27,000+ stars each).

TECHNICAL SKILLS

- Backend: Node.js, Express, Fastify, ES modules, REST APIs, webhooks, Socket.IO, scheduled jobs
- Data: PostgreSQL, SQL migrations, row-level security, Supabase, SQLite
- Frontend: React, TypeScript, plain HTML, CSS and JavaScript, Chrome MV3 extensions
- AI: Claude Code, Codex, Anthropic Claude API, OpenAI API, DeepSeek, agent review loops with automated tests
- Testing and delivery: node:test, Playwright, Vitest, GitHub Actions, Docker, Linux VPS (Ubuntu, systemd, Nginx), Vercel, Python, ffmpeg

EXPERIENCE

MDS Pro Solutions - Full Stack Developer (Contract) | Feb 2026 - Present

- Sole engineer on the timekeeping and billing platform (TypeScript, Node.js/Fastify, Postgres, Chrome extension) a US nurse staffing company runs on, used every workday by 15 people.
- Postgres schema across 47 migrations: clock-ins stamped by the database, append-only records, and every correction approved and attributed.
- Found and closed an access hole that let any signed-in nurse read every colleague's billed rate through a path the API's admin check never saw, fixed in the database itself.
- Traced a pay-rate mismatch in the nurses' panel to a second, different rate lookup, and moved it onto the same one payroll uses, so a future-dated raise no longer shows early.
- Shipped an Ask AI agent on the Claude API that answers questions with SQL against a read-only database role (500-row cap), with per-question cost tracking and nightly encrypted backups.

Independent Developer | 2021 - Present

- Built and shipped web, mobile and automation systems end to end: architecture, development, deployment and maintenance.

PROJECTS

WordWarz.io - Real-Time Multiplayer Word Game | Node.js, Express, Socket.IO, React

- Node.js and Socket.IO game server with a React client, live in the browser, the App Store and Google Play: 570 players have reached a game across 1,045 matches, 40 to 70 playing on a given day.
- Fixed account deletion failing for every player with Practice history (a delete-order bug undone by its own transaction), which blocked an App Store submission; covered by a regression test.
- Took the client from zero automated tests to a Playwright suite that plays a real two-browser match, gated in GitHub Actions beside the server's 584 tests. Server runs in Docker on a Linux VPS.

Cockpit - AI Coding Control Plane | JavaScript, Node.js

- Runs Claude Code and Codex side by side: one agent builds, automated tests verify with no AI involved, a second read-only agent reviews in a fixed format, then I approve and a git checkpoint is saved.

Jobsift - Self-Hosted Job Data Pipeline | Python, Linux VPS

- Runs 24/7 as a systemd service on an Ubuntu VPS. Traced a five-day silent stop to exhausted AI credits in the server journal, then added step-by-step pass reporting so a stalled run shows up.

Open Source | TypeScript

- Merged into recharts (27,000+ stars): an auto-height axis feature and two bug fixes, with visual-regression baselines. Merged into mastra (28,000+ stars): retries that honor Retry-After.

EDUCATION

- Bachelor of Science in Information Technology, AMA Computer College Makati (3 of 4 years completed)
