KIM JULONGBAYAN

Full Stack Developer | Web and Mobile Apps | React, Next.js, Supabase / PostgreSQL

Quezon City, Metro Manila, Philippines | kljulongbayan@gmail.com | +63 961 529 9305

Portfolio: kimlj.dev | GitHub: github.com/kimlj | LinkedIn: linkedin.com/in/kimjulongbayan

PROFESSIONAL SUMMARY

- Full-stack developer with 3 years of professional software development experience. Shipped a real-time app to the web, the App Store and Google Play, and sole engineer on a production platform used every workday by 15 people.
- Builds the whole product end to end, from the database and its access rules to the API, the web and mobile screens, admin dashboards, automated tests and deployment.
- Available full time, 40 hours per week, for milestone-based project work with daily written updates.

TECHNICAL SKILLS

- TypeScript, JavaScript, Python | React, Next.js, Tailwind CSS, Capacitor, React Native / Expo, Zustand | Node.js, Fastify, Express, Socket.IO, REST APIs
- PostgreSQL, Supabase (auth, realtime, row-level security), SQL migrations, SQLite | Playwright, GitHub Actions, Codemagic
- Vercel, Docker, Linux VPS, Nginx, Git | App Store Connect, TestFlight, Google Play Console | Claude Code, Claude API

EXPERIENCE

MDS Pro Solutions - Full Stack Developer (Contract) | Feb 2026 - Present

- Sole engineer on the timekeeping and billing platform used every workday by 15 people: TypeScript and Fastify API, Supabase / Postgres, and a Chrome extension staff clock in through.
- Role-based access for staff, admins and the owner enforced in the database by 41 row-level security policies; closed a hole that let any signed-in user read colleagues' billed rates.
- Built the admin dashboard (seven screens, live staff status over Postgres realtime) and the payroll and invoice workbooks, all generated from one shared pay calculation.
- Server-stamped, append-only records with an approved correction trail, and nightly encrypted off-site backups of the production database.

Independent Full Stack Developer | 2021 - Present

- Build and ship web and mobile apps end to end. Working demos and project walkthroughs: https://kimlj.dev/hub.

PROJECTS

WordWarz.io - Web, iOS and Android App | React, Capacitor, Node.js, Socket.IO

- Real-time multiplayer game in the browser and on the App Store and Google Play; 570 players since launch across 1,045 matches, with 40 to 70 playing on a given day.
- Owned the iOS and Android releases through Codemagic, from signed builds and TestFlight to store review, including a fix for an App Store account-deletion blocker.
- CI-gated Playwright suite plays a real two-player match and checks phone, tablet and desktop layouts, beside 584 server tests.

DailyLoad - React Native App (in development) | Expo, React Navigation, Zustand

- Onboarding and tab flows, local SQLite data, and health permissions on iOS HealthKit and Android Health Connect.

mdsprosolutions.com - Business Site with Booking Forms | Vercel

- Booking and job-application forms validated on the server, each sending the requester a confirmation; an AI assistant with rate limits and an hourly spend cap.

OPEN SOURCE CONTRIBUTIONS

- recharts, a charting library with over 27,000 GitHub stars (4 merged, 2026): XAxis height="auto" sizing, a connectNulls bug across stacked series, a redundant axis dispatch, and a docs example. Each reviewed by a maintainer.
- mastra, an AI agent framework with over 29,000 GitHub stars (1 merged, 2026): agent model-call retries now honor Retry-After instead of retrying straight back into a rate-limited provider.

EDUCATION

- Bachelor of Science in Information Technology, AMA Computer College Makati (3 of 4 years completed)
