

KIM JULONGBAYAN

AI Operations and Automation Developer | Billing and Reporting Systems | Workflow Automation

Quezon City, Metro Manila, Philippines | kljulongbayan@gmail.com | +63 961 529 9305

Portfolio: kimlj.dev | GitHub: github.com/kimlj | LinkedIn: linkedin.com/in/kimjulongbayan

PROFESSIONAL SUMMARY

- AI and automation developer who rebuilds manual workflows end to end: billing, payroll, reporting and lead intake. Sole engineer on a production platform 15 people use every workday.
- Works with AI daily: custom agents with tools, six automation platforms, and Claude Code for 772 hours across 43 projects (as of Sep 2026).

TECHNICAL SKILLS

- AI and LLMs: Claude API, OpenAI GPT-4o, DeepSeek, custom agents with tool use, prompt design, MCP, Claude Code
- Workflow automation: n8n, Make, Zapier, Power Automate, Google Apps Script, webhooks, REST APIs, scheduled jobs
- Spreadsheets and reporting: Google Sheets API, Apps Script, SUMIFS and QUERY reporting panels, Looker Studio, Excel workbooks (ExcelJS)
- Email and alerts: Gmail and IMAP processing, transactional email (Resend), Telegram and Slack alerts, severity routing
- Data and infrastructure: PostgreSQL, Supabase, SQLite, Python, TypeScript, JavaScript | Docker, Linux VPS, Vercel, GitHub Actions

EXPERIENCE

MDS Pro Solutions - Full Stack Developer (Contract) | Feb 2026 - Present

- Sole engineer on the timekeeping and billing platform used every workday by 15 people: a nursing team working remotely across the Philippines, and the owner in the US.
- Generated timesheet, payroll and client-invoice Excel workbooks from one shared pay calculation, so every report agrees to the cent.
- A scheduled sync fills the company's Google Sheet, tracks what each client still owes, and reports mismatches instead of overwriting typed figures.
- Replaced an editable payroll sheet with server-stamped clock-ins, append-only records and approved, named corrections, so every change to someone's hours is visible.
- Built "Ask AI", an agent the owner asks in plain English: it queries the database through a read-only role and reads Google Sheets, with cost tracked on every question.
- Built the company site's lead intake: booking requests go to sales and job applications to HR, each validated and confirmed by email, plus an AI assistant that hands unanswered questions to a person.

Independent AI and Automation Developer | 2021 - Present

- Built and shipped AI and automation systems end to end, from design through deployment and maintenance.

PROJECTS

Jobsift - AI Email Triage and Pipeline Tracker | Python

- Reads alert emails and job boards, merges the same listing across sources, has an AI score each one, tracks every application by stage in Google Sheets, and alerts on Telegram.
- Started as an n8n workflow and was rebuilt in Python when it outgrew the platform. Runs unattended on a server.

Shift Ops Console - Exception Pipeline Across Six Platforms | Simulated data

- For a simulated 100-person workforce: n8n rules engine, Make daily digest and severity routing, Power Automate approvals, Zapier urgent Slack alerts, Looker Studio dashboards.
- Measured it: 359 of 370 planted problems caught (97.0%), then fixed its own scorer, cutting the false-positive rate from 9% to 1.0%.

AI Job Matcher - Chrome Extension (in development) | OpenAI API

- Parses job listings into structured data, matches them against a resume with an LLM, and drafts personalized cold emails with tone control for review before sending.

EDUCATION

- Bachelor of Science in Information Technology, AMA Computer College Makati (3 of 4 years completed)
