

KIM JULONGBAYAN

Full-Stack Developer | Next.js and Supabase | n8n Automation

Quezon City, Metro Manila, Philippines | kljulongbayan@gmail.com | +63 961 529 9305

Portfolio: kimlj.dev | GitHub: github.com/kimlj | LinkedIn: linkedin.com/in/kimjulongbayan

PROFESSIONAL SUMMARY

- Full-stack developer, 5+ years, and the sole engineer on a production platform 15 people use every workday. It handles attendance, payroll and client invoicing, so when it breaks somebody is not paid, and I am the one who gets called.
- Different users seeing different data is the part I would want checked: 35 row-level security policies over 15 tables, so a nurse, an admin and the client each see their own slice, plus a blanket read I found and closed before it exposed every nurse's billed rate.

TECHNICAL SKILLS

- Front end: React, Next.js App Router, TypeScript, JavaScript, Vite, Tailwind CSS, responsive layouts
- Data: PostgreSQL, Supabase, schema design, SQL migrations, row-level security and role-based permissions, PostgREST, SQLite, MongoDB
- APIs and automation: REST, JSON, webhooks, scheduled jobs, n8n (self-hosted), Make, Zapier, Power Automate, Google Sheets API, Apps Script, Gmail and IMAP, Telegram
- Payments and web: hosted checkout and return flows, on-page SEO and analytics setup, landing pages, Vercel, Netlify, Docker, Linux VPS, Nginx, Git and CI/CD
- AI-assisted development: Claude Code daily, 779 hours and 16,403 prompts across 43 projects (as of Sep 2026, published at kimlj.dev), plus 21 custom skills and 4 subagents written to keep its output correct

EXPERIENCE

MDS Pro Solutions - Full Stack Developer (Contract) | Jun 2026 - Present

- Sole engineer on the timekeeping and billing platform used every workday by 15 people: a nursing team across the Philippines, and the owner in the US. One repository holds the server, API, dashboard, Chrome extension and Apps Script.
- Automated the owner's spreadsheet without taking it away from him. It stays the operational source of truth, and a scheduled sync fills only blank cells and reports mismatches instead of overwriting what somebody typed by hand.
- Generated the timesheet, payroll and client-invoice workbooks from one shared calculation, so every report agrees to the cent and a disputed figure traces back to the punch it came from.
- Fixed live during working hours, because there is no window when nobody is clocked in. Records are append-only and every correction is attributed and approved, so a bad fix cannot quietly rewrite history.
- Onboard each nurse over Zoom myself, walk them through the extension, and take the owner through the dashboard when something changes.

Independent Developer | 2018 - Present

- Built and shipped web, mobile and AI systems end to end for real users, including WordWarz.io, live on the web and the iOS App Store: 570 players across 1,045 matches, 40 to 70 on a given day, by word of mouth alone.
- Built and maintain the client marketing site at mdsprosolutions.com, including the on-page SEO, the contact forms and the bot protection on them.

SELECTED PROJECTS

Shift Ops Console - Scheduling, Attendance and Alerting | n8n, Make, Zapier, Power Automate, Apps Script

- Recurring rosters for a simulated 100-person workforce across nine timezones, including the daylight saving switches that quietly break schedules written for one hemisphere.
- n8n holds the rules, Make sends the daily digest, Zapier fires the urgent alert the moment an exception appears. Tested by planting known problems and counting: 370 planted, 359 caught, 97.0 percent, with the false positives reported too.

E-Commerce Platform - Registration, Payments and Admin | Next.js, MongoDB

- Signup and login, search, cart, a hosted checkout session with the payment provider and the return flow after it, and an admin behind its own login for orders, products and users.

Jobsift - When a Workflow Outgrows the Platform | Python, n8n, Claude API

- Started as an n8n workflow and became a self-hosted Python service once the branching outgrew the canvas. Five sources, structured records, scoring, an alert only above threshold. Knowing when to leave a no-code tool is the judgment this needed.

EDUCATION

- Bachelor of Science in Information Technology, AMA Computer College Makati (3 of 4 years completed)
