

KIM JULONGBAYAN

Software Developer | TypeScript, React, Node.js, Python | Open Source

Quezon City, Metro Manila, Philippines | kljulongbayan@gmail.com | +63 961 529 9305

Portfolio: kimlj.dev | GitHub: github.com/kimlj | LinkedIn: linkedin.com/in/kimjulongbayan

PROFESSIONAL SUMMARY

- Software developer with 5 years building web software end to end, working remotely with a US client as the sole engineer on a production platform 15 people use every workday.
- Code reviewed and accepted by other engineering teams: 5 pull requests merged into recharts and mastra (27,000+ stars each), and a root-cause trace credited by OpenAI's Codex maintainers.

TECHNICAL SKILLS

- Languages: TypeScript, JavaScript, Python, SQL, HTML, CSS
- Frameworks: React, Next.js, Node.js, Fastify, Express, Socket.IO, Tailwind CSS, Capacitor (iOS)
- Data and infrastructure: PostgreSQL, Supabase, row-level security, SQLite, Docker, Linux server, Nginx, Vercel
- Practices: Git and GitHub pull requests, code review, automated tests (Playwright, unit tests), GitHub Actions CI, database migrations
- AI: Claude Code (834 hours, as of Oct 2026), Codex, Claude API and OpenAI API integration

EXPERIENCE

MDS Pro Solutions - Full Stack Developer (Contract) | Feb 2026 - Present

- Sole engineer on the timekeeping, payroll and invoicing platform a US nursing company runs on (TypeScript, Fastify, Supabase/Postgres, Chrome extension), used every workday by 15 people across the Philippines and the US.
- Work directly with the owner in the US: turning business rules for pay and billing into code, and explaining changes in plain terms before they ship.
- Found and closed a security hole that let any logged-in nurse read every colleague's billed rate, on a path the server's admin check never saw.
- Built Ask AI, an assistant on the Claude API that answers the owner's questions from the database through a read-only account, with the cost of every question recorded.
- Built the public site, mdsprosolutions.com, on Vercel, with an AI chat assistant.

Independent Developer | 2018 - Present

- Built and shipped web, mobile and automation projects end to end: design, code, deployment and upkeep.

OPEN SOURCE CONTRIBUTIONS

- recharts, a React charting library with 27,000+ stars (4 merged): a new XAxis height="auto" option with its docs example, and two bug fixes. Each reviewed by a maintainer.
- mastra, an AI agent framework with 28,000+ stars (1 merged): agent retries now wait as long as a rate-limited provider asks instead of retrying straight away.
- OpenAI Codex CLI (127,000+ stars): traced a Windows bug to two lines of its Rust source, retested the first fix and showed it missed a case. The maintainer credited the trace.

PROJECTS

WordWarz.io - Real-Time Multiplayer Word Game | React, Node.js, Socket.IO

- Live in the browser and on the iOS App Store: 570 players have reached a game across 1,045 matches, with 40 to 70 playing on a given day, grown by word of mouth alone.
- A Playwright suite plays a real match across two browsers against a fresh game server, beside 584 server tests.

Jobsift - Self-Hosted Job Pipeline | Python

- Reads job boards and email alerts, filters out misfits before any AI call, and alerts on Telegram. Runs 24/7 as a service on a Linux server.

EDUCATION

- Bachelor of Science in Information Technology, AMA Computer College Makati (3 of 4 years completed)
