

KIM JULONGBAYAN

Full Stack Product Engineer | SaaS Platforms | Database Design | OpenAI and API Integration

Quezon City, Metro Manila, Philippines | kljulongbayan@gmail.com | +63 961 529 9305

Portfolio: kimlj.dev | GitHub: github.com/kimlj | LinkedIn: linkedin.com/in/kimjulongbayan

PROFESSIONAL SUMMARY

- Product engineer, 5+ years building software end to end and 3+ integrating AI. Sole engineer on a production platform 15 people use every workday, built directly with its owner.
- Five pull requests merged into recharts and mastra (27,000+ stars each), each through a maintainer's code review.

TECHNICAL SKILLS

- Data and access: PostgreSQL and Supabase data modeling, authentication, role-based access with row-level security, SQL migrations, SQLite
- AI and API integration: OpenAI API, Claude API, embeddings, prompt engineering, REST APIs, webhooks, Google Sheets API, Telegram Bot API
- Workflow automation: n8n, Make, Zapier, Power Automate, Google Apps Script, Looker Studio
- Product and front end: React, TypeScript, JavaScript, Tailwind CSS, dashboards, ExcelJS reporting, Chrome MV3 extensions
- Quality and delivery: automated tests, Playwright, GitHub Actions, Docker, Linux VPS, Nginx, Vercel, Git

EXPERIENCE

MDS Pro Solutions - Full Stack Developer (Contract) | Feb 2026 - Present

- Sole engineer on the timekeeping and billing platform (TypeScript, Fastify, Supabase/Postgres, Chrome extension) used every workday by 15 people, from nurses across the Philippines to the owner in the US.
- Role-based access for nurses, staff and admins enforced in the database itself (40 row-level security policies across 46 migrations), including closing a hole that let any signed-in nurse read every colleague's billed rate.
- Admin dashboard of seven screens (6,000+ lines) with nurse status updating live, plus timesheet, payroll and invoice reports built from one shared pay calculation, so every report agrees to the cent.
- Built Ask AI on the Claude API: admins ask questions in plain English, the model writes the query, a read-only database role runs it under a row cap, and each answer's cost is recorded.
- Syncs billing into the owner's Google Sheet through the Sheets API, filling only blank cells and reporting mismatches instead of overwriting figures the owner typed.
- Replaced an editable payroll spreadsheet: punches are stamped by the database, records are append-only, and every correction goes through an approved, attributed trail.

Independent AI and Automation Developer | 2018 - Present

- Built and shipped AI-integrated web, mobile and automation systems end to end: architecture, development, deployment, and maintenance.

PROJECTS

Jobsift - Self-Hosted Job Alert and Scoring Pipeline | Python

- Rewrote an n8n workflow as a Python service once it outgrew the platform: reads job boards directly where they allow it and email alerts where they do not.
- Throws out obvious misfits before any AI call, so a rejected job costs nothing; SQLite store, Google Sheets archive, Telegram alerts, running 24/7 on a Linux server.

RecodeAI - AI Website Redesigner | Claude API

- Chained Claude API pipeline: crawl a site, analyze its brand identity, generate a redesign, and deploy it to a live URL, streamed in real time with per-model cost estimation.

AI Job Matcher - Chrome Extension | OpenAI API

- Scrapes job listings, parses them into structured data, matches roles with resume-aware LLM analysis, and generates personalized outreach with tone control.

WordWarz.io - Real-Time Multiplayer Game | React, Node.js, Socket.IO

- Shipped to the browser and the iOS App Store: 570 players have reached a game across 1,045 multiplayer matches, 40 to 70 playing on a given day, grown by word of mouth alone.
- Covered by 584 server tests and a Playwright suite that plays a full match across two browsers against the release build.

EDUCATION

- Bachelor of Science in Information Technology, AMA Computer College Makati (3 of 4 years completed)
