KIM JULONGBAYAN

AI Creative Workflows | Image Generation, Editing and Video Production

Quezon City, Metro Manila, Philippines | kljulongbayan@gmail.com | +63 961 529 9305
Portfolio: kimlj.dev | GitHub: github.com/kimlj | LinkedIn: linkedin.com/in/kimjulongbayan

PROFESSIONAL SUMMARY

- Developer with 3 years of professional software development experience and over a year of hands-on AI work. Builds custom image pipelines and delivers finished visual assets.
- Portfolio includes 60+ AI-generated game avatars, reference-based clothing imagery, character style transfer and a published narrated onboarding film. Work at kimlj.dev/#ai-showcase and kimlj.dev/hub.

TECHNICAL SKILLS

- Image generation and editing: ComfyUI, Stable Diffusion, RealVisXL, ControlNet Depth, Depth Anything V2, IPAdapter, BiRefNet background removal
- Production: Python and API automation, prompt templates, controlled image comparisons, batch naming, WebP optimization, FFmpeg H.264 compression
- Video: Remotion, React, TypeScript, Kokoro text-to-speech, captions, scene timing, 1080p rendering; Claude Code and ChatGPT
- Workflow: Git, reusable instructions, documented generation settings and visual review

SELECTED CREATIVE PROJECTS

ComfyUI Asset Pipeline (WordWarz.io) | Shipped game assets

- Built a Python-driven workflow that sends prompt-template variations to ComfyUI through its API; produced 60+ avatars used in the released game.
- Automated file naming, BiRefNet background removal and PNG-to-WebP conversion, reducing image file sizes by 90% in the showcased pipeline.
- Published before-and-after comparisons with fixed seeds to show how specific prompts correct ambiguous wording and literal interpretations.

Reference-Based Image Generation | Portfolio showcases

- Generated photorealistic outfits from a mannequin reference with RealVisXL and ControlNet Depth, preserving pose and adjusting control strength by clothing type.
- Used IPAdapter and DreamShaper XL to preserve an illustration's style across different poses, angles and facial expressions.

MDS Pro Staff Onboarding Film | Published client video

- Built an eight-minute, five-act Remotion film with animated app screens, AI-generated narration and captioned and clean versions sharing one timeline.
- Measured narration durations to set scene timing, rendered representative frames for visual review, and calibrated cursor positions against the 1920x1080 output.
- Delivered H.264 video with AAC audio at 30 fps, published beside a written guide at mdsprosolutions.com/onboarding.

Portfolio Opening Film | Browser animation

- Built a seekable canvas animation with scene transitions and music synthesized in the browser; frames derive from playback time so seeking stays consistent.

EXPERIENCE

MDS Pro Solutions - Full Stack Developer (Contract) | Feb 2026 - Present

- Sole engineer on a US nursing company's timekeeping and billing platform, used every workday by 15 people across the Philippine team and US owner.
- Work directly with the owner on requirements, production support and staff documentation; created the onboarding film and written guide for new hires.

EDUCATION

- BS Information Technology, AMA Computer College Makati (3 of 4 years completed)
