KIM JULONGBAYAN

AI Automation Engineer | n8n, REST APIs, Python & PostgreSQL

Quezon City, Metro Manila, Philippines | kljulongbayan@gmail.com | +63 961 529 9305
Portfolio: kimlj.dev | GitHub: github.com/kimlj | LinkedIn: linkedin.com/in/kimjulongbayan

PROFESSIONAL SUMMARY

- Developer with 3 years of professional software experience and 1-2 years building AI integrations and automations. Sole engineer on a production platform used every workday by 15 people.
- Builds internal tools from design through deployment, with data checks, documented decisions and ongoing maintenance. Interactive examples at https://kimlj.dev/hub.

TECHNICAL SKILLS

- Automation: n8n, Google Apps Script, REST APIs, webhooks, JSON; Zapier and Make in a simulated operations project
- AI: Claude Code, Anthropic API, OpenAI API, tool-using agents, MCP server authoring
- Languages and data: JavaScript, TypeScript, Python, PostgreSQL, Supabase, SQLite, Google Sheets API
- Operations: Docker and Compose, Linux VPS, Git, GitHub Actions, automated checks and documentation

EXPERIENCE

MDS Pro Solutions - Full Stack Developer (Contract) | Feb 2026 - Present

- Built and maintain the company's timekeeping and billing platform for a remote Philippine team and US owner, with server-stamped records and approved corrections.
- Integrated an Anthropic-powered assistant with read-only database queries and Google Sheets lookup, capped results and per-question cost tracking.
- Automated billing updates into Google Sheets, filling blank cells and reporting differences while preserving manually entered adjustments.
- Generate payroll, timesheet and invoice workbooks from one pay calculation; independently reconcile monthly reports against underlying records.
- Document billing behavior, correction rules and operational recovery so changes preserve both system records and the owner's manual entries.

SELECTED SYSTEMS

Cockpit - Local Agent Workflow on DeepSeek Harness

- Built a local workflow where an agent builds, tests verify, a separate read-only agent reviews and requests fixes, then the owner approves before a Git checkpoint.
- Single-user, in development. Claude Code made the 93-second film: https://kimlj.dev/cockpit.

Shift Ops Console - n8n and Zapier Demonstrator

- Built a rules engine for a simulated 100-person workforce; connected Google Sheets, n8n, Make, Zapier alerts, Power Automate approvals and Looker Studio.
- Fixed repeated n8n sheet reads that expanded 16,000 rows into 1.6 million items; kept 15 rules in one Code node with 18 fixture checks.
- Tested detection against 370 planted problems and caught 359 (97%); independently rechecked the scoring and corrected its false-positive calculation.

Jobsift - AI-Assisted Job Pipeline

- Rebuilt a Gmail, AI, Sheets and Telegram n8n workflow in Python; runs 24/7 on a Linux VPS with SQLite storage, duplicate detection and documented recovery steps.
- Wrote a Dockerfile and Compose setup with a non-root user, read-only filesystem, persistent data mounts, memory limits and rotated logs.

Jarvis Router - Personal MCP Server

- Wrote a Python MCP server with four async tools that query self-hosted photo, location and knowledge stores over REST and combine the results. Personal, single-user.

EDUCATION

- {'BS Information Technology, AMA Computer College Makati': '3 of 4 years completed; degree not conferred.'}
