

KIM JULONGBAYAN

Full Stack Developer | AI Agents | TypeScript, React, Postgres

Quezon City, Metro Manila, Philippines | kljulongbayan@gmail.com | +63 961 529 9305

Portfolio: kimlj.dev | GitHub: github.com/kimlj | LinkedIn: linkedin.com/in/kimjulongbayan

PROFESSIONAL SUMMARY

- Full stack developer with 5+ years building web, mobile and AI systems end to end. Sole engineer on a US healthcare staffing platform that handles patient data, used every workday by 15 people.
- Builds AI agents with tool calling, automations in n8n, Make and Zapier, and Postgres schemas with row-level security. Works daily in Claude Code: 772 hours as of Sep 2026.

TECHNICAL SKILLS

- TypeScript, JavaScript, Python, SQL | React, Next.js, Tailwind CSS | Node.js, Fastify, Express, FastAPI | PHP and Laravel (coursework)
- PostgreSQL, Supabase, schema design, row-level security, SQLite | DigitalOcean, Linux VPS, Docker, Caddy, Nginx, Vercel functions, GitHub Actions
- AI agents: Claude API and Claude Code, OpenAI, DeepSeek, tool calling, multi-step agent workflows, embeddings, cost tracking
- Integrations: n8n, Make, Zapier, REST APIs, webhooks, Google Sheets API, Gmail, Resend, Telegram Bot API

EXPERIENCE

MDS Pro Solutions - Full Stack Developer (Contract) | Feb 2026 - Present

- Sole engineer on the timekeeping and billing platform of a US nurse staffing company, used every workday by 15 people: TypeScript, Fastify and Supabase/Postgres, with the API on a DigitalOcean droplet and a Chrome extension.
- Handles patient information in production: 45 migrations with 35 row-level security policies, append-only records with approved and attributed corrections, nightly encrypted off-site backups.
- Closed a row-level security hole that let any nurse read colleagues' billed rates straight from the database, on a path the API's admin check never saw.
- Built Ask AI, a Claude agent with two tools: SQL through a read-only Postgres role (500-row cap) and a Google Sheets reader, with the cost of every question recorded.
- Billing sync into the owner's Google Sheet fills only blank cells and reports mismatches instead of overwriting; payroll and invoice workbooks come from one shared calculation.
- Company website with a Claude chat assistant given no tools, rate limits and an hourly spend cap; booking and job-application forms route to sales and HR.

PROJECTS

Jobsift - Self-Hosted AI Job Pipeline | Python, github.com/kimlj/jobsift

- Began as an n8n workflow, rebuilt in Python when it outgrew it. Merges one job arriving from several boards under differently written company names, with versioned key migrations.
- AI split into roles that check each other (extractor, drafter, per-claim verifier); tested against six prompt-injection postings. Runs 24/7 as a systemd service on a DigitalOcean droplet.

Shift Ops Console - n8n Rules Engine | n8n, Make, Zapier

- 15 rules in one n8n Code node, tested before import, on a simulated 100-person workforce. Fixed a run that never finished: each read step re-ran per item, 1.6 million items.

WordWarz.io - Real-Time Multiplayer Game | React, Node.js, Socket.IO

- React and Node.js over Socket.IO, on the web and the App Store: 570 players have reached a game across 1,045 matches, 40 to 70 playing on a given day.

OPEN SOURCE CONTRIBUTIONS

- mastra, an AI agent framework with over 27,000 GitHub stars: agent model-call retries now honor Retry-After instead of retrying straight into a rate-limited provider.
- recharts, a charting library with over 27,000 GitHub stars: 4 merged pull requests, each reviewed by a maintainer.

EDUCATION

- Bachelor of Science in Information Technology, AMA Computer College Makati (3 of 4 years completed)
