KIM JULONGBAYAN

Product Data Research | AI Verification | Google Sheets and Excel

Quezon City, Metro Manila, Philippines | kljulongbayan@gmail.com | +63 961 529 9305
Portfolio: kimlj.dev | GitHub: github.com/kimlj | LinkedIn: linkedin.com/in/kimjulongbayan

PROFESSIONAL SUMMARY

- Data-focused developer with 3 years of professional software development experience. Builds and maintains spreadsheet workflows, checks records against source data, and uses AI with separate verification.
- Works remotely with a US company and a Philippine team. Owns a MacBook; available immediately for 20 hours per week, Asia/Manila (UTC+8).

SKILLS

- Spreadsheets: Google Sheets formulas, cleanup, reconciliation, Sheets API, Google Apps Script; Excel workbook generation and reporting.
- AI and validation: ChatGPT, Claude, DeepSeek, prompt writing, structured outputs, source-backed records, duplicate checking and independent verification.
- Data tools: Python, JavaScript, SQL, PostgreSQL, SQLite, REST APIs and data imports; Google Sheets archives and reporting dashboards.

EXPERIENCE

MDS Pro Solutions - Full Stack Developer (Contract) | Feb 2026 - Present

- Sole engineer on a timekeeping and billing platform used every workday by 15 people across a Philippine team and a US owner.
- Built the billing Google Sheet sync to fill only blank cells and flag mismatches, preserving manually entered figures for review.
- Generate timesheet, payroll and client-invoice Excel workbooks from one shared calculation so every output agrees to the cent.
- Built monthly reporting across two companies covering profit, cash, expenses and amounts owed. Independently recompute source entries to reconcile sheets, pay periods and dashboard totals.
- Added a plain-English AI query tool over real company records, using read-only database access, result limits and per-question cost tracking.

Independent Software Developer | 2021 - Present

- Built data workflows and web products from collection through validation and reporting. Working demos: https://kimlj.dev/hub.

SELECTED DATA AND AI PROJECTS

Jobsift - Data Collection, AI Scoring and Spreadsheet Archive | Python, Google Sheets

- Collects structured listings from board APIs and email alerts, applies filters, archives records in Google Sheets and tracks application stages.
- Merges duplicate listings using normalized company names and titles. Separates extraction, drafting and claim verification into different AI roles.

Shift Ops Console - Rules and Reporting Demonstrator | Google Sheets, Apps Script, n8n

- Built a workflow for a simulated 100-person workforce across nine time zones, with spreadsheet records, rules, approvals, alerts and dashboards.
- Validated the rules against 370 planted anomalies: detected 359 (97%). Found an error in the scorer and corrected it, reducing the reported false-positive rate from 9% to 1%.

Jarvis - Personal Data Validation | Python, CSV imports

- Verified 26,653 imported media timestamps against their manifest with zero mismatches; checked UTC date interpretation and excluded virtual-activity GPS from location records.

EDUCATION

- BS Information Technology, AMA Computer College Makati: 3 of 4 years completed; degree not conferred.
