KIM JULONGBAYAN

Full Stack Web and Mobile Developer | React, Next.js, TypeScript, Postgres | iOS and Android Releases

Quezon City, Metro Manila, Philippines | kljulongbayan@gmail.com | +63 961 529 9305
Portfolio: kimlj.dev | GitHub: github.com/kimlj | LinkedIn: linkedin.com/in/kimjulongbayan

PROFESSIONAL SUMMARY

- Full stack developer with 3 years of professional experience, shipping web and mobile apps end to end on my own, from the database and its permissions to the App Store and Google Play releases.

TECHNICAL SKILLS

- Frontend and mobile: React, Next.js, TypeScript, Tailwind CSS, Capacitor (iOS and Android), React Native and Expo, Chrome MV3
- Backend and data: Node.js, Fastify, Express, Socket.IO, Python, FastAPI | PostgreSQL, Supabase, row-level security, versioned migrations, SQLite
- Payments and APIs: PayMongo checkout, REST APIs, OAuth, Anthropic and OpenAI APIs, Google Sheets API, Resend email
- Testing and delivery: Playwright, GitHub Actions, Codemagic, TestFlight, Google Play Console, Docker, Linux VPS, Vercel

EXPERIENCE

MDS Pro Solutions - Full Stack Developer (Contract) | February 2026 - Present

- Sole engineer on the timekeeping and billing platform a US nursing staffing company runs on (TypeScript, Fastify, Supabase/Postgres, Chrome MV3), used every workday by 15 people in the Philippines and the US.
- Pay and billing from one calculation: each client is billed one rate and each nurse paid another from the same hours, with date-effective rates, so payroll, invoices and the dashboard agree to the cent.
- Scheduling rules in code: shift windows that follow US daylight saving, overnight shifts kept as one shift day, and time corrections refused when they overlap another task.
- Permissions in the database: 41 row-level-security policies across 49 migrations. Closed a hole that let any signed-in nurse read colleagues' billed rates on a path the API's admin check never saw.
- Built the admin dashboard (seven screens, live status over Postgres realtime) with an approval trail for every correction, and the company's website with booking and application forms that send confirmation emails.
- Made an 8-minute onboarding video in Remotion (React) that walks a new hire through the real app screens, live at mdsprosolutions.com/onboarding.

Independent Full Stack Developer | 2021 – Present

- Built and shipped web, mobile and real-time apps end to end, from design to the live server and the app stores.

PROJECTS

WordWarz.io - Real-Time Multiplayer Game (Web, iOS, Android) | React, Capacitor, Node.js, Socket.IO

- Built and run solo, live at wordwarz.io, on the App Store and on Google Play. 570 players have reached a game across 1,045 matches, with 40 to 70 playing on a given day.
- Own release pipeline: Codemagic builds signed iOS and Android apps for TestFlight and Play testing, then store review. Fixed an App Store rejection over account deletion and resubmitted.
- A Playwright suite plays a real two-browser match against a fresh database on every pull request, beside 584 server tests.

Kikoy's Bike Shop - Online Store (thesis project) | Next.js, TypeScript, PayMongo

- Product search, cart, order history and an admin dashboard, with checkout through PayMongo's hosted page (cards, GCash, GrabPay and Maya).
- Next.js App Router with API routes for products and search, orders, saved addresses and favorites, and an admin side for users and orders.

OPEN SOURCE

- Merged: recharts (27,000+ stars), four React and TypeScript pull requests including XAxis height="auto"; mastra (29,200 stars), agent model-call retries now honor Retry-After.

EDUCATION

- Bachelor of Science in Information Technology, AMA Computer College Makati (3 of 4 years completed)
