

KIM JULONGBAYAN

Full Stack Developer | JavaScript, TypeScript, Node.js | Integrations and AI-Assisted Development

Quezon City, Metro Manila, Philippines | kljulongbayan@gmail.com | +63 961 529 9305

Portfolio: kimlj.dev | GitHub: github.com/kimlj | LinkedIn: linkedin.com/in/kimjulongbayan

PROFESSIONAL SUMMARY

- Developer with 5+ years building software end to end in JavaScript, TypeScript and Node.js, and 1-2 years building with AI coding tools. Sole engineer on a production platform 15 people use every workday.
- Investigates before escalating: traced a Windows bug in OpenAI's Codex CLI (127,000+ stars) to its root cause, and has five pull requests merged into recharts and mastra (27,000+ stars each).

TECHNICAL SKILLS

- Languages and runtime: JavaScript, TypeScript, Node.js, Python, SQL, HTML, CSS
- Backend and integrations: Fastify, Express, REST APIs, webhooks, Socket.IO, Google Sheets API, Apps Script, Chrome MV3 extensions, scheduled jobs
- Data: PostgreSQL, Supabase, row-level security, SQLite, ExcelJS, data migrations
- AI-assisted development: Claude Code, Codex, Claude API, OpenAI API, agent review loops with automated tests
- Testing and delivery: Playwright, Vitest, GitHub Actions, Git, Docker, Linux (Ubuntu VPS, systemd, Nginx), Vercel

EXPERIENCE

MDS Pro Solutions - Full Stack Developer (Contract) | Feb 2026 - Present

- Sole engineer on the timekeeping and billing platform (TypeScript, Fastify, Supabase/Postgres, Chrome MV3 extension) a US nurse staffing company runs on, used every workday by 15 people across the Philippines and the US.
- Connected the platform to the owner's Google Sheet: a scheduled billing sync fills only blank cells and reports mismatches rather than overwriting typed figures, replacing manual entry.
- Found and closed an access hole that let any signed-in nurse read every colleague's billed rate through a path the API's admin check never saw, fixed at the database layer.
- Generated timesheet, payroll and client-invoice Excel workbooks from one shared pay calculation, so every report agrees to the cent.
- Shipped an Ask AI agent on the Claude API that answers questions with SQL against a read-only database role (500-row cap) and the Sheets API, with per-question cost tracking.

Independent Developer | 2021 - Present

- Built and shipped web, mobile and automation systems end to end: architecture, development, deployment and maintenance.

PROJECTS

WordWarz.io - Real-Time Multiplayer Word Game | Node.js, Socket.IO, React

- Node.js and Socket.IO game server with a React client, live in the browser, the App Store and Google Play: 570 players have reached a game across 1,045 matches, 40 to 70 playing on a given day.
- Took the client from zero automated tests to a Playwright suite that plays a real two-browser match, gated in GitHub Actions beside the server's 584 tests.

Cockpit - AI Coding Control Plane | JavaScript, Node.js

- Runs Claude Code and Codex side by side: one agent builds, automated tests verify with no AI involved, a second read-only agent reviews in a fixed format, then I approve and a git checkpoint is saved.

Jobsift - Self-Hosted Job Data Pipeline | Python, Linux VPS

- Pulls listings from job boards' APIs and email alerts, dedups them across sources and filters before any AI call; runs 24/7 as a systemd service on an Ubuntu VPS, with SQLite, Google Sheets and Telegram.

Open Source | TypeScript

- Merged into recharts (27,000+ stars): an auto-height axis feature and two bug fixes, with visual-regression baselines. Merged into mastra (28,000+ stars): retries that honor Retry-After.

EDUCATION

- Bachelor of Science in Information Technology, AMA Computer College Makati (3 of 4 years completed)
