KIM JULONGBAYAN

Full Stack Developer | Internal Tools and Automation | AI-Assisted with Claude Code

Quezon City, Metro Manila, Philippines | kljulongbayan@gmail.com | +63 961 529 9305

Portfolio: kimlj.dev | GitHub: github.com/kimlj | LinkedIn: linkedin.com/in/kimjulongbayan

PROFESSIONAL SUMMARY

- Full stack developer with 5+ years building web apps and 1-2 years building with AI tools daily. Sole engineer on the internal platform a US company runs on, used every workday by 15 people, built directly with its leadership.
- Works with Claude Code, Codex and ChatGPT every day, and reads and tests everything they produce before calling it done.

TECHNICAL SKILLS

- Web apps: JavaScript, TypeScript, React, Node.js, Fastify, Express, Python, SQL (PostgreSQL, Supabase, SQLite), Chrome extensions
- Automation and integrations: Google Sheets API, Apps Script, Excel reports with ExcelJS, email (Resend, IMAP), REST APIs, webhooks, n8n, Make, Zapier
- AI: Claude Code, Codex, ChatGPT, Claude API, OpenAI, DeepSeek | Testing: Playwright, regression tests, GitHub Actions | Docker, Linux VPS, Vercel

EXPERIENCE

MDS Pro Solutions - Full Stack Developer (Contract) | Feb 2026 - Present

- Sole engineer on the timekeeping, payroll and billing platform (TypeScript, Fastify, Supabase/Postgres, Chrome extension) for a US nurse staffing company, used every workday by 15 people from nurses to the owner.
- Replaced an editable payroll spreadsheet: clock-ins are stamped by the database, records are append-only, and every correction goes through an approved, attributed trail.
- Admin dashboard with live staff status, plus timesheet, payroll and client-invoice Excel files built from one shared pay calculation, so every report agrees to the cent.
- Billing sync into the owner's Google Sheet fills only blank cells and reports mismatches instead of overwriting typed figures. A monthly financial view across two companies is checked by recomputing every month from the raw entries.
- Built an AI assistant on the Anthropic SDK that answers the owner's questions from the database through a read-only account and from the Google Sheet, with the cost of every question recorded.
- Found and closed an access hole that let any signed-in nurse read every colleague's billed rate, on a path the server's admin check never saw.

Independent Full Stack Developer | 2021 - Present

- Built and shipped web, mobile and automation projects end to end: design, code, testing, deployment and upkeep.

PROJECTS

MDS Pro Solutions Website (mdsprosolutions.com) | JavaScript, Vercel

- Hand-built company site with a booking form routed to sales and a job application form routed to HR, each sending a confirmation email, plus an AI chat assistant with spend and rate limits.

Jobsift - Self-Hosted Job Pipeline (github.com/kimlj/jobsift) | Python, SQLite, Google Sheets

- Started as an n8n workflow and rebuilt in Python when it outgrew it: reads job boards and email alerts, filters, logs to a Google Sheet and sends Telegram alerts, running 24/7 on a Linux server.
- Caught AI-written code that rejected all 28 jobs from a new source on its first live run, fixed the location mapping and added a regression test through the real check.

Cockpit - AI Coding Workbench | Claude Code, Codex

- One agent builds, automated tests check with no AI involved, a read-only reviewer agent sends problems back, then I approve and a git checkpoint is saved. Short film made by Claude Code: kimlj.dev/cockpit.

WordWarz.io - Real-Time Multiplayer Game | React, Node.js, Socket.IO

- Plays in the browser, the App Store and Google Play: 570 players across 1,045 matches, 40 to 70 on a given day. Playwright tests play a real match on every pull request.

EDUCATION

- Bachelor of Science in Information Technology, AMA Computer College Makati (3 of 4 years completed)
