

# KIM JULONGBAYAN

Python and Node | Scheduled Pipelines | Browser Automation | Production Ownership

Quezon City, Metro Manila, Philippines | kljulongbayan@gmail.com | +63 961 529 9305

Portfolio: kimlj.dev | GitHub: github.com/kimlj | LinkedIn: linkedin.com/in/kimjulongbayan

## PROFESSIONAL SUMMARY

---

- Sole engineer on a production platform used every workday by a nursing team and by the US registered nurse who owns the company. Reading the overnight output, working the exceptions, and explaining what broke on a call to a clinician rather than an engineer is the job I already have.
- Four merged fixes into other people's codebases, recharts and mastra, both around 27,000 stars. Reading unfamiliar code and proving what it actually does is the part of this work I have most evidence for.

## TECHNICAL SKILLS

---

- Python: packaged services, email and API ingestion, structured extraction, SQLite, pypdf, virtualenvs, scripts other people have to run
- JavaScript and Node: Fastify, Express, Playwright end-to-end tests, Puppeteer-style DOM automation, Chrome MV3 extensions
- Terminal and operations: git, ssh, systemd units and timers, cron, Windows Task Scheduler, log files, Docker, Linux VPS, Nginx, Google Cloud service accounts, PostgreSQL and Supabase, Vercel
- Verification: writing the failing test first, measuring a detector against planted answers, and making a job report what it produced rather than that it finished

## EXPERIENCE

---

### MDS Pro Solutions - Full Stack Developer (Contract) | Jun 2026 - Present

- Sole engineer on the timekeeping and billing platform used every workday by 15 people: a nursing team across the Philippines, and the US registered nurse who owns the staffing company. Python, TypeScript, Postgres, a Chrome extension, scheduled jobs.
- Chased a silent failure where a job reported success and changed nothing. Two files defined the same top-level function, Apps Script shares one global namespace, and the last file loaded silently won, so edits to the other copy did nothing.
- Fixed it twice over: deleted the duplicate, then made the function log the exact range it built, so a mismatch now says in one line that a different copy is running. A job that cannot show its output is not reporting success.
- It is US healthcare data and I treat it that way: named logins rather than shared ones, DMARC so nobody can invoice a client facility while wearing our billing address, nightly encrypted off-site backups, and a document naming what is not restorable.
- Explain the failures on a call in the owner's words rather than mine, and onboard each nurse over Zoom myself, walking them through the extension they clock in with.

### Independent Developer | 2018 - Present

- Built and shipped systems end to end for real users, including WordWarz.io, live on the web and the iOS App Store: 570 players across 1,045 matches, 40 to 70 on a given day, by word of mouth alone.
- Wrote its Playwright suite from nothing: the config boots the server on a throwaway database and the release build of the client, and a spec plays a real two-player match.

## SELECTED WORK

---

### Open Source - Debugging Code I Did Not Write | recharts, mastra

- recharts #7566: an area chart drew a line across stacked points where every series was null. Wrote the reproducing chart, regenerated the browser snapshots in the project's own Docker harness. Also #7570 and #7565, and mastra #19906, making a retried model call wait as long as the provider asked for.

### Jobsift - Scheduled Python Pipeline | Python, SQLite, Claude API

- A packaged Python service on a schedule: pulls from five sources, extracts structured records, scores them, stores the evidence, alerts only above a threshold. Its deploy document covers systemd, cron and Task Scheduler, including which defaults are wrong.

### Shift Ops Console - Measuring Whether the Detector Works | n8n, Apps Script, Looker Studio

- Planted 370 known problems and counted what the detector caught: 359, 97.0 percent, false positives reported rather than hidden. Re-running gave different numbers, so I found out why.

## EDUCATION

---

- Bachelor of Science in Information Technology, AMA Computer College Makati (3 of 4 years completed)
