

KIM JULONGBAYAN

Full Stack Developer | Backend Systems | AI Integration

Quezon City, Metro Manila, Philippines (UTC+8) | kljulongbayan@gmail.com | +63 961 529 9305

Portfolio: kimlj.dev | GitHub: github.com/kimlj | LinkedIn: linkedin.com/in/kimjulongbayan

PROFESSIONAL SUMMARY

- Full stack developer with 5+ years building software end to end, currently sole engineer on a production timekeeping and billing platform in daily use by 15 people across the Philippines and the US.
- 4 pull requests merged into maintained open-source projects in 2026 (recharts, mastra), each reviewed by a maintainer before landing. Current role is fully remote, Philippine team and US owner.

TECHNICAL SKILLS

- Languages: JavaScript, TypeScript, Python | Frontend: React, Next.js, Tailwind CSS, Chrome MV3 extensions
- Backend: Node.js, Express, Fastify, Socket.IO, REST APIs, WebSockets | PostgreSQL (row-level security, SECURITY DEFINER functions, versioned migrations, composite indexing, realtime), Supabase, SQLite
- AI integration: Claude API and GPT, Claude Code as primary development environment, prompt engineering, LLM workflow automation | Automation: n8n, Zapier, Make, Power Automate, Google Apps Script
- Infrastructure: Docker, CI/CD, Google Cloud, Vercel, Linux VPS, Nginx, Git, Sentry, encrypted backups

EXPERIENCE

MDS Pro Solutions - Full Stack Developer (Contract) | June 2026 - Present

- Sole engineer on the internal timekeeping and billing platform (TypeScript, Fastify, Supabase/Postgres, Chrome MV3 extension) used every workday by 15 people: a nursing team remote across the Philippines, and the owner in the US.
- Own the Postgres security model across 44 versioned migrations: 35 row-level-security policies over 18 tables, 23 SECURITY DEFINER functions, and composite indexes chosen by query shape.
- Found and closed a row-level-security hole that let any authenticated nurse read every colleague's billed rate straight from PostgREST, on a path the API server's admin guard never saw.
- Built the admin dashboard in vanilla JS: 6,000+ lines across seven surfaces (overview, timesheets, payroll, invoicing, corrections, team), with nurse status streaming over Postgres realtime.
- Shipped "Ask AI", an agent on the Anthropic SDK whose generated SQL runs through a SELECT-only Postgres role under a row cap, with per-question cost tracking and nightly encrypted off-site backups.

Independent Full Stack Developer | 2018 - Present

- Built REST APIs and real-time systems for independent projects and clients; optimised database queries and backend performance, working remotely with clients.

OPEN SOURCE CONTRIBUTIONS

- recharts (3 merged): XAxis height="auto" sizing to tick labels; a connectNulls bug across stacked series; a redundant CartesianAxis dispatch. Reviewed by a maintainer, with CI snapshot guards to fix.
- mastra (1 merged): agent model-call retries now honour Retry-After instead of retrying straight back into a rate-limited provider.

PROJECTS

WordWarz.io - Real-Time Multiplayer Game with AI Bot System

- Architected a full-stack web and mobile game (React, Capacitor, Node.js/Socket.IO) on a sub-100ms WebSocket backend; 570 players across 1,045 matches since launch, 40-70 daily, by word of mouth alone.
- Designed a multi-tier AI bot system with ELO-based matchmaking and dynamic difficulty scaling.

Shift Ops Console - Multi-Platform Automation and Compliance Rules Engine

- Built a schedule-adherence and labour-compliance pipeline for a 100-person workforce across 9 timezones, split across six automation platforms by fit; measured the detector rather than asserting it, planting 370 anomalies and catching 359 (97.0%), then found the measurement itself wrong and rebuilt the scorer.

Jobsift - Self-Hosted Job Alert Pipeline (Python)

- Rewrote an n8n workflow as a self-hosted Python package: five job-board JSON APIs, IMAP alerts, HTML as a last resort; hard filters run before scoring so a rejected job never costs an LLM call.

EDUCATION

- BS Information Technology - AMA Computer College Makati (3 of 4 years completed)
