

KIM JULONGBAYAN

Full Stack Developer | Next.js, React, Google Sheets API, Vercel

Quezon City, Metro Manila, Philippines | kljulongbayan@gmail.com | +63 961 529 9305

Portfolio: kimlj.dev | GitHub: github.com/kimlj | LinkedIn: linkedin.com/in/kimjulongbayan

PROFESSIONAL SUMMARY

- Full Stack Developer with 5+ years of on-and-off experience building independent projects and one production system in daily use - web, mobile and AI-integrated systems.
- Builds dashboards over live data with server-side API routes that keep credentials off the browser, including Google Sheets read and write through a service account.
- Works daily with Claude Code and Codex, inside a review loop of his own design where a second agent checks the first one's work.

TECHNICAL SKILLS

- JavaScript, TypeScript, Python | React, Next.js, Tailwind CSS, Capacitor, Chrome MV3 | Node.js, Express, Fastify, Socket.IO | PostgreSQL, Supabase, Postgres RLS | REST APIs, WebSockets
- Google Sheets API (service accounts), Apps Script, ExcelJS | Vercel, Docker, Linux VPS, Nginx, GitHub Actions, Git
- Claude Code, Codex, Claude API, GPT-4o, n8n

EXPERIENCE

MDS Pro Solutions - Full Stack Developer (Contract) | February 2026 - Present

- Wrote billing into the owner's Google Sheet through a service account, key held server-side; the sync fills only blank cells and reports mismatches instead of overwriting typed figures.
- Sole engineer on the timekeeping and billing platform (TypeScript, Fastify, Supabase/Postgres, Chrome MV3) used every workday by 15 people, with a live admin dashboard.
- Generated timesheet, payroll and client-invoice Excel workbooks with ExcelJS from one shared pay calculation, so every surface agrees to the cent.
- Shipped plain-English database questions on the Claude API, run through a read-only Postgres role, with per-question cost tracking and nightly encrypted off-site backups.

Independent Full Stack Developer | 2018 – Present

- Built REST APIs and real-time systems; optimized database queries and backend performance.

PROJECTS

Live Hub (kimlj.dev/hub) - Status Dashboard on Vercel

- Public dashboard of the services I run, fed by one server-side API route that probes each upstream and pulls token-gated game figures, so no token reaches the browser and a dead service shows as a red dot instead of a hung page.

WordWarz.io - Real-Time Multiplayer Game with AI Bot System

- Web and mobile game (React, Capacitor, Socket.IO) on the App Store and Google Play; 570 players across 1,045 matches since launch, 40 to 70 playing on a given day.
- Multi-tier AI bots with ELO matchmaking, an entropy-driven guesser and adaptive difficulty; Playwright end-to-end suite in CI.

Cockpit - Agent Development Control Plane

- Local tool running Claude Code and Codex side by side, with a build loop where one agent builds, automated tests check, and a read-only second agent reviews before owner approval and a git checkpoint.

OPEN SOURCE CONTRIBUTIONS

- recharts, a charting library with over 27,000 GitHub stars (3 merged, 2026): XAxis height="auto" sizing, a connectNulls bug across stacked series, and a redundant CartesianAxis dispatch. Each reviewed by a maintainer before landing.
- mastra, an AI agent framework with over 27,000 GitHub stars (1 merged, 2026): agent model-call retries now honor Retry-After.

EDUCATION

- Bachelor of Science in Information Technology - AMA Computer College Makati (3 of 4 years completed)
