KIM JULONGBAYAN

Software Developer | API Integrations, Landing Pages & Automation

Quezon City, Metro Manila, Philippines | kljulongbayan@gmail.com | +63 961 529 9305

Portfolio: kimlj.dev | GitHub: github.com/kimlj | LinkedIn: linkedin.com/in/kimjulongbayan

PROFESSIONAL SUMMARY

- Full Stack Developer with 5+ years building independent software and a production healthcare platform used every workday by 15 people.
- Own delivery from TypeScript/Python APIs and databases to mobile layouts, email routing, deployment and operating instructions. Live demos: kimlj.dev/hub

TECHNICAL SKILLS

- JavaScript, TypeScript, Python | React, Next.js, HTML/CSS | Node.js, Fastify, Express | REST APIs, web-app callbacks | PostgreSQL, Supabase, SQLite
- Google Sheets API, Apps Script, Resend | n8n, Make, Zapier, Power Automate | Vercel, Linux VPS, Docker, GitHub Actions | Playwright, Sentry

EXPERIENCE

MDS Pro Solutions - Full Stack Developer (Contract) | Feb 2026 - Present

- Sole engineer on a TypeScript/Postgres timekeeping and billing platform used daily by 15 people across a Philippine team and a US owner.
- Connected billing to Google Sheets: fills blank cells, reports mismatches and preserves manual figures; payroll and invoices share one calculation.
- Fixed missing staff in billing with automatic roster placement, stable IDs, scheduled reconciliation and Apps Script web-app calls to rebuild entries.
- Protected production patient information with row-level permissions, append-only time records, attributed corrections and encrypted off-site backups.

MDS Pro Solutions - Marketing Website | mdsprosolutions.com

- Built and deployed mobile layouts and validated forms: facility bookings route to sales, nurse applications to HR, with confirmation emails via Resend.
- Added a public chat assistant with human email handoff, rate limits and a spend cap; deployed the hand-coded HTML/CSS/JavaScript site on Vercel.

SELECTED PROJECTS

Jobsift - Email and Job Alert Automation

- Built Gmail extraction, GPT-4o scoring, Sheets logging and Telegram alerts in n8n; rebuilt in Python with SQLite and application status tracking.
- Prevented duplicate alerts across sources; diagnosed stopped email extraction in server logs and restored it by switching the AI provider.

WordWarz.io - Landing Pages and Attribution

- Shipped four discovery pages and first-touch campaign/referrer tracking; records landing views and Play clicks and joins sources to game activity.
- Released the React game on web, iOS and Android; added a CI-gated Playwright suite checking a real two-browser match and device layout selection.

Shift Ops Console - Conditional Workflow Demonstrator

- Built rules, severity routing, urgent Slack alerts and approvals with n8n, Make, Zapier and Power Automate for a simulated 100-person workforce.

OPEN SOURCE

- Merged a retry fix into mastra (28,706 GitHub stars): API calls honor Retry-After instead of immediately retrying a rate-limited provider.

EDUCATION

- BS Information Technology coursework, AMA Computer College Makati: 3 of 4 years completed; degree not conferred.
