KIM JULONGBAYAN

AI and Automation Developer | Billing and Reconciliation Automation | APIs and Integrations

Quezon City, Metro Manila, Philippines | kljulongbayan@gmail.com | +63 961 529 9305
Portfolio: kimlj.dev | GitHub: github.com/kimlj | LinkedIn: linkedin.com/in/kimjulongbayan

PROFESSIONAL SUMMARY

- Automation developer with 3 years of professional software development experience and 1-2 years building AI into business workflows. Sole engineer on a production billing and payroll platform 15 people use every workday.
- Takes a process from mapping through architecture, build, testing and written documentation, with automated checks that flag discrepancies for a person to review rather than changing figures silently.

TECHNICAL SKILLS

- AI and LLM: Claude API, OpenAI, DeepSeek, AI agents with read-only tools, data extraction, structured output validation, per-question cost tracking
- Automation and integration: n8n, Make, Zapier, Power Automate, Google Sheets API, Apps Script, Gmail and IMAP, REST APIs, webhooks, scheduled jobs
- Data and finance: PostgreSQL, Supabase, row-level security, SQLite, ExcelJS payroll and invoice workbooks, reconciliation checks
- Languages and infrastructure: Python, TypeScript, JavaScript | Docker, Linux VPS, Vercel, Git, GitHub Actions

EXPERIENCE

MDS Pro Solutions - Full Stack Developer (Contract) | Feb 2026 - Present

- Sole engineer on the timekeeping, payroll and billing platform (TypeScript, Fastify, Supabase/Postgres) used every workday by 15 people across a Philippine team and a US owner.
- Generated timesheet, payroll and client-invoice workbooks with ExcelJS from one shared pay calculation, so every document agrees to the cent.
- Synced billing into the owners' Google Sheet through the Sheets API, filling only blank cells and reporting mismatches instead of overwriting typed figures.
- Built a monthly financial view across two companies (profit, cash, money owed, expenses), with a check that recomputes each month from raw entries and reconciles it with pay periods and the dashboard.
- Shipped an AI assistant on the Claude API that answers questions about the data: an account that can only read, a row cap, and the cost of every question recorded.
- Replaced an editable payroll spreadsheet with server-stamped, append-only records and approved corrections; protects patient data with row-level security and encrypted off-site backups.

Independent Software Developer | 2021 - Present

- Build and ship AI and automation systems end to end: process mapping, architecture, development, testing and maintenance. Live demos: https://kimlj.dev/hub.

PROJECTS

Jobsift - Email and Data Processing Pipeline | Python, LLM APIs

- Reads job boards' APIs and email alerts over IMAP, extracts structured details with an AI model, and runs hard filters before any AI call; runs 24/7 on a Linux server with a Google Sheets archive.
- Splits AI work into roles that check each other, with a verifier that checks each claim without seeing the source; started in n8n and rebuilt in Python when the workflow hit its limits.

Shift Ops Console - Multi-Platform Automation | n8n, Make, Zapier, Power Automate

- Exception detection for a simulated 100-person workforce, split across n8n, Make, Zapier and Power Automate by fit; measured its own detector, found the scorer was wrong and rebuilt it.

Cockpit - AI Agent Development Workflow | Not public yet

- Built on DeepSeek Harness: one agent builds, automated tests check, a second read-only agent reviews, then I approve. Not public yet; live walkthrough and commit history available, film at kimlj.dev/cockpit made by Claude Code.

EDUCATION

- Bachelor of Science in Information Technology, AMA Computer College Makati (3 of 4 years completed)
