KIM JULONGBAYAN

Full-Stack Software Engineer | TypeScript, React, Node.js, PostgreSQL

Quezon City, Metro Manila, Philippines | kljulongbayan@gmail.com | +63 961 529 9305
Portfolio: kimlj.dev | GitHub: github.com/kimlj | LinkedIn: linkedin.com/in/kimjulongbayan

PROFESSIONAL SUMMARY

- Full-stack developer with 3 years of professional experience. Sole engineer on a production timekeeping and billing platform used every workday by 15 people.
- Own features from requirements through deployment, with database access controls, automated checks and AI-assisted development reviewed before release.

TECHNICAL SKILLS

- TypeScript, JavaScript, React, Tailwind CSS, Node.js, Fastify, Express, PostgreSQL, Supabase, SQL migrations, REST APIs, Socket.IO
- Playwright, GitHub Actions, Git, Docker, Linux VPS, Vercel, Claude Code, Codex, MCP, Claude API; Prisma in a Next.js project

EXPERIENCE

MDS Pro Solutions - Full Stack Developer (Contract) | February 2026 - Present

- Built the timekeeping and billing platform end to end with TypeScript, Fastify and PostgreSQL, including a Chrome extension and live admin dashboard.
- Closed a permissions hole that exposed colleagues' billed rates through direct database requests, beyond the API's admin checks.
- Centralized payroll and client-invoice calculations so exported workbooks agree to the cent, with date-effective rates that preserve past periods.
- Shipped 49 SQL migrations with 41 row-level security policies; database-stamped clock-ins and attributed corrections protect payroll records.
- Automated billing into Google Sheets without overwriting typed figures, and checked monthly financial summaries against the underlying records.

SELECTED PROJECTS

Cockpit - AI Development Workbench

- Built on DeepSeek Harness, its workflow separates the builder, automated tests and an independent reviewer before owner approval and a git checkpoint.
- Not public yet; live walkthrough and commit history available. Claude Code made the overview video at kimlj.dev/cockpit.

WordWarz.io - React and Node.js Multiplayer Game

- Shipped React and Capacitor apps on the web, App Store and Google Play, with real-time multiplayer over Node.js and Socket.IO.
- Built CI-gated Playwright tests that play a two-browser match against an isolated database and check phone, tablet and desktop layouts.
- Owned signed mobile builds and releases through Codemagic, TestFlight and Google Play; resolved an account-deletion blocker for App Store review.

Jarvis - Personal MCP Server

- Wrote an async Python MCP server with four tools that query three self-hosted stores over REST and combine the results; used daily in Claude Code.

OPEN SOURCE

- Five maintainer-reviewed PRs merged into recharts and mastra, projects with 27,000+ GitHub stars each, covering chart correctness and API retry behavior.

EDUCATION

- BS Information Technology, AMA Computer College Makati (3 of 4 years completed; degree not conferred)
