KIM JULONGBAYAN

AI and Automation Developer | Agent Workflows, Production QA and Data Systems

Quezon City, Metro Manila, Philippines | kljulongbayan@gmail.com | +63 961 529 9305
Portfolio: kimlj.dev | GitHub: github.com/kimlj | LinkedIn: linkedin.com/in/kimjulongbayan

PROFESSIONAL SUMMARY

- Developer with 3 years of professional software experience and 1-2 years building AI workflows. Sole engineer on a production platform used every workday by 15 people.
- Builds agents with independent verification, maintains sourced context, and automates data checks. Combines production software ownership with reporting and programmatic video.

TECHNICAL SKILLS

- Claude Code, Codex, DeepSeek | Claude and OpenAI APIs, agent instructions, structured output validation
- Python, TypeScript, JavaScript, SQL | Google Sheets API, Apps Script, ExcelJS | PostgreSQL, Supabase
- n8n, Make, Zapier, Power Automate | Remotion, React, technical SEO, Search Console | Git, Docker, Linux

EXPERIENCE

MDS Pro Solutions - Full Stack Developer (Contract) | Feb 2026 - Present

- Sole engineer on the timekeeping, payroll and billing platform used daily by 15 people; owns the database, API, admin dashboard and ongoing maintenance.
- Built monthly financial reporting across two companies, covering profit, cash, outstanding client payments and expenses in Google Sheets and the dashboard.
- Wrote an independent check that recomputes monthly figures from raw records and reconciles them with pay-period totals and the dashboard.
- Built a Claude API assistant that reads database and sheet records, using a dedicated read-only Postgres role and per-question cost tracking.
- Automated billing sync that fills blank cells and flags mismatches while preserving figures entered by the owner.
- Produced an eight-minute onboarding film in React and Remotion, with narrated, captioned walkthroughs of the real workflow; published at mdsprosolutions.com/onboarding.

PROJECTS

Cockpit - Personal Agent Development Workspace | https://www.kimlj.dev/cockpit

- Built on DeepSeek Harness: a builder agent, automated tests, an independent read-only reviewer, remediation, owner approval and a git checkpoint.
- Not public yet; available for a live walkthrough and commit history review. The linked public film was made by Claude Code. Demos: https://www.kimlj.dev/hub

Jobsift - AI Workflow and Evidence Pipeline | github.com/kimlj/jobsift

- Separated extraction, drafting and per-claim verification; the verifier sees trusted evidence but not the posting, reducing pressure to approve unsupported claims.
- Compiles 40 repos and curated facts into a checked evidence brief, so the drafting workflow uses sourced context instead of rediscovering each project.
- Rebuilt an n8n job-alert workflow in Python; filters listings before AI scoring, deduplicates records and sends Google Sheets logs and Telegram alerts.

WordWarz.io - Shipped Product and Search Measurement | https://wordwarz.io

- Shipped a React game on web, iOS and Android; implemented technical SEO pages and acquisition tracking that connects traffic sources to game activity.

Generative Asset Pipeline - ComfyUI and Python

- Automated prompt-template batches, background removal and WebP conversion; generated the 60+ avatars shipped in WordWarz.io.

EDUCATION

- BS Information Technology coursework, AMA Computer College Makati. Completed 3 of 4 years; degree not conferred.
