KIM JULONGBAYAN

Web Developer | Technical SEO Implementation, Performance and GEO

Quezon City, Metro Manila, Philippines | kljulongbayan@gmail.com | +63 961 529 9305
Portfolio: kimlj.dev | GitHub: github.com/kimlj | LinkedIn: linkedin.com/in/kimjulongbayan

PROFESSIONAL SUMMARY

- Developer with 3 years of professional software development experience. Hands-on technical SEO work in 2026 across a US nursing company's website and a shipped multiplayer game.
- Implements changes directly in HTML, CSS and JavaScript, from canonical URLs and structured data to mobile performance. Live work and demos at kimlj.dev/hub.

TECHNICAL SKILLS

- SEO implementation: crawlability, indexation diagnostics, canonicalization, internal links, XML sitemaps, robots.txt, JSON-LD structured data and rendering checks
- Diagnostics: Google Search Console, Bing Webmaster Tools, IndexNow, Lighthouse, Chrome DevTools
- Development: HTML, CSS, JavaScript, TypeScript, Python, Node.js, SQL, Git, GitHub Actions, Vercel; PHP/MySQL coursework
- Performance and GEO: critical CSS, responsive images, deferred scripts, caching, search-intent pages, AI crawler rules and acquisition tracking

EXPERIENCE

MDS Pro Solutions - Full Stack Developer (Contract) | Feb 2026 - Present

- Built and maintain the public company website in HTML, CSS and JavaScript on Vercel, implementing SEO fixes directly in the codebase.
- Corrected heading levels and titles, aligned canonical and structured-data URLs to one host, and implemented sitemaps, robots.txt and JSON-LD.
- Investigated search discovery by checking crawler responses, rendered content and Search Console discovery signals; documented the missing inbound-link path.
- Extracted critical CSS, minified assets, added responsive image variants and deferred offscreen work to reduce mobile rendering cost.
- Improved mobile performance from 83 to 93 and LCP from 3.9 to 2.6 seconds in comparable local Lighthouse runs; CLS stayed at zero. These are lab measurements.
- Identified the headline as the mobile LCP element and deferred scripts so text could paint earlier, rather than treating every LCP problem as an image issue.
- Document SEO decisions and benchmark results in maintained project guides.
- Also own the production timekeeping and billing platform used every workday by 15 people, working directly with the US owner on delivery and support.

PROJECTS

WordWarz.io - Search and AI Discovery Implementation | React, Node.js, HTML

- Shipped four static pages for distinct search intents, with direct answers, FAQs, comparisons, internal links, unique metadata and visible-content structured data.
- Added sitemap entries and explicit AI-search crawler rules, keeping product wording consistent across the discovery pages.
- Built first-touch UTM/referrer tracking that distinguishes Google, Bing and AI assistants, joining landing views and Play clicks to game activity.
- Published discovery pages independently of the React game, giving each search intent its own crawlable URL.

Letooth - Clinic System | PHP, MySQL coursework

- Built a PHP/MySQL clinic system with a 10-table schema, session authentication for three roles, and a jQuery/Bootstrap interface.

EDUCATION

- BS Information Technology, AMA Computer College Makati (3 of 4 years completed)
