KIM JULONGBAYAN

AI and Automation Developer | Integration and End-to-End Testing | n8n, Make, Zapier
Quezon City, Metro Manila, Philippines | kljulongbayan@gmail.com | +63 961 529 9305
Portfolio: kimlj.dev | GitHub: github.com/kimlj | LinkedIn: linkedin.com/in/kimjulongbayan

PROFESSIONAL SUMMARY

- Developer who tests what ships: 5+ years building software and 1-2 years on AI agents and automation. Sole engineer on a production platform 15 people use every workday.
- Traced a Windows bug in OpenAI's Codex (127,000+ stars) with a control run, retested OpenAI's first fix and showed it still failed 4 of 4 launches; the maintainer credited the trace, and the shipped fix passed 20 of 20.

TECHNICAL SKILLS

- Testing: end-to-end tests with Playwright in CI, regression tests, prompt-injection and hostile-input testing of AI pipelines, bug reports with steps, expected and actual results
- Automation platforms: n8n, Make, Zapier, Power Automate, Google Apps Script, Looker Studio
- APIs and auth: REST APIs, webhooks, Google Sheets API, Slack, Telegram Bot API, OAuth app connections, server-side token checks, Postgres row-level security
- AI and code: Claude API, Claude Code, Codex, OpenAI, MCP servers | Python, TypeScript, SQL | Supabase/Postgres, Docker, GitHub Actions

EXPERIENCE

MDS Pro Solutions - Full Stack Developer (Contract) | Feb 2026 - Present

- Sole engineer on the timekeeping and billing platform (TypeScript, Fastify, Supabase/Postgres, Chrome extension) used every workday by 15 people: nurses and staff across the Philippines, admins and the owner in the US.
- Found and closed an access hole where any signed-in nurse could read every colleague's billed rate by querying the database directly, on a path the API's admin check never saw.
- Built an AI agent on the Anthropic SDK with two tools: SQL through a read-only database role capped at 500 rows, and Google Sheets reads, with the cost of every question recorded.

Independent AI and Automation Developer | 2021 - Present

- Built and shipped AI-integrated web, mobile and automation systems end to end: architecture, development, testing, deployment and maintenance.

PROJECTS

Shift Ops Console - One Pipeline Across Six Automation Platforms | n8n, Make, Zapier, Power Automate

- Schedule-compliance pipeline for a simulated 100-person workforce: n8n rules engine, Make digest and routing, Power Automate approvals, Zapier Slack alerts, Apps Script data, Looker Studio dashboards.
- Found Make mappings that run green and do nothing, a zero-row day that sends no message and looks broken, and an n8n chain that multiplied to 1.6 million items and never finished.
- Measured its own detector, 359 of 370 planted problems caught (97.0%), then found the scorer itself was wrong and rebuilt it: false positives fell from 9% to 1.0%.

WordWarz.io - Real-Time Multiplayer Game | React, Node.js, Playwright

- Playwright suite plays a real match across two browsers against a fresh database, blocks production traffic, and runs on every pull request beside 584 server tests.
- Shipped to the browser, the App Store and Google Play: 570 players across 1,045 matches, 40 to 70 on a given day. Cleared an App Store rejection with a fix, review notes and a walkthrough video.

Jobsift - Self-Hosted Job Pipeline with AI Drafting | Python, n8n origin

- Started as an n8n workflow and rebuilt in Python when it hit its limits. AI work split into roles that check each other: an extractor, a drafter, and a verifier that checks every claim.
- Attacked its own AI step with six prompt-injection postings and its link fetcher with 23 hostile URLs; caught a source mapping that wrongly rejected 28 roles and added a regression test.

Cockpit - AI Agent Workbench | Claude Code, Codex

- One agent builds, automated tests check with no AI involved, a read-only reviewer agent sends problems back, then owner approval and a git checkpoint. Short film made by Claude Code: kimlj.dev/cockpit.

EDUCATION

- Bachelor of Science in Information Technology, AMA Computer College Makati (3 of 4 years completed)
