KIM JULONGBAYAN

Full Stack Product Engineer | React, TypeScript | Mobile and Web

Quezon City, Metro Manila, Philippines | kljulongbayan@gmail.com | +63 961 529 9305
Portfolio: kimlj.dev | GitHub: github.com/kimlj | LinkedIn: linkedin.com/in/kimjulongbayan

PROFESSIONAL SUMMARY

- Full stack developer with 5+ years building web apps, and the sole engineer on a production platform a US company uses every workday, shipping, supporting and maintaining features used by 15 people.
- Ships mobile too: a React app live on the App Store and Google Play with its own release pipeline, and a React Native fitness app on Expo in development.

TECHNICAL SKILLS

- Web: TypeScript, JavaScript, React, Vite, Tailwind CSS, Zustand | Mobile: React Native, Expo, React Navigation, Capacitor, App Store and Google Play releases (Codemagic, TestFlight)
- Backend: Node.js, Express, Fastify, Socket.IO, REST APIs, zod schemas | PostgreSQL, Supabase, row-level security, SQL migrations, Prisma
- Quality and delivery: Playwright, server test suites, GitHub Actions, Docker, Linux VPS, Vercel | AI-assisted development with Claude Code

EXPERIENCE

MDS Pro Solutions - Full Stack Developer (Contract) | Feb 2026 - Present

- Sole engineer on the timekeeping, payroll and billing platform for a US nurse staffing company (TypeScript, Fastify REST API, Supabase/Postgres, Chrome extension on the Chrome Web Store), used every workday by 15 people.
- Admin dashboard with live staff status, plus timesheet, payroll and client-invoice files built from one shared pay calculation, so every screen and report agrees to the cent.
- Fixed a staff panel that showed a future pay rate before its effective date by moving it onto the same rate lookup payroll uses, so the two can no longer disagree.
- Database schema across 47 Postgres migrations with row-level security; found and closed an access hole that let any signed-in nurse read colleagues' billed rates, on a path the API's admin check never saw.
- Built an AI assistant on the Anthropic SDK that answers the owner's questions from the database through a read-only account, with the cost of every question recorded.

Independent Full Stack Developer | 2018 - Present

- Built and shipped web, mobile and automation projects end to end: design, code, testing, release and upkeep.

PROJECTS

WordWarz.io - Real-Time Multiplayer Game (iOS, Android, web) | React, Vite, Capacitor, Express, Socket.IO

- Live in the browser, on the App Store and on Google Play: 570 players across 1,045 matches since launch, with 40 to 70 playing daily.
- Owns the releases: signed iOS builds through Codemagic to TestFlight and App Store review, Android to Google Play. Cleared an App Store rejection where account deletion failed for some players.
- Playwright tests play a real match across two browsers on every pull request, beside 584 server tests in GitHub Actions.

DailyLoad - React Native Fitness App (in development) | React Native, Expo, TypeScript

- Onboarding and tab navigation with React Navigation, Zustand state, SQLite storage, and health data from iOS HealthKit and Android Health Connect.

Jobsift - Self-Hosted Job Pipeline (github.com/kimlj/jobsift) | Python, SQLite

- Reads job boards and email alerts every day, filters and scores postings, and runs 24/7 on a Linux server with tests in CI.

OPEN SOURCE CONTRIBUTIONS

- recharts, a React and TypeScript charting library with over 27,000 GitHub stars (4 merged, 2026): XAxis height="auto" sizing, a stacked-area bug fix, a redundant render dispatch and a docs example, each reviewed by a maintainer.

EDUCATION

- Bachelor of Science in Information Technology, AMA Computer College Makati (3 of 4 years completed)
