KIM JULONGBAYAN

AI Business Automation | Process Improvement | Healthcare Operations

Quezon City, Metro Manila, Philippines | kljulongbayan@gmail.com | +63 961 529 9305
Portfolio: kimlj.dev | GitHub: github.com/kimlj | LinkedIn: linkedin.com/in/kimjulongbayan

PROFESSIONAL SUMMARY

- Developer with 3 years of professional software development experience and 1-2 years in AI automation. Sole engineer on a healthcare operations platform used every workday by 15 people.
- Builds practical workflows around billing, reporting and staff operations, with access controls, human review and documentation. Project demos at kimlj.dev/hub.

TECHNICAL SKILLS

- AI and integration: Claude API, OpenAI API, ChatGPT, tool-using assistants, REST APIs, Google Sheets API.
- Automation: n8n, Make, Zapier, Power Automate, Google Apps Script; scheduled workflows, approvals and alerts.
- Development and data: Python, TypeScript, JavaScript, SQL, PostgreSQL, Supabase, SQLite, ExcelJS, Linux, Docker.

EXPERIENCE

MDS Pro Solutions - Full Stack Developer (Contract) | Feb 2026 - Present

- Own development and maintenance of a healthcare timekeeping and billing platform used daily by nurses, staff, administrators and a US owner, 15 people in total.
- Redesigned a 65-column billing sheet into period-based rows; automated billing sync fills blanks and flags mismatches while preserving manually entered figures.
- Generate timesheet, payroll and client-invoice workbooks from one shared pay calculation, keeping reports consistent to the cent.
- Built monthly reporting across two companies for profit, cash, receivables and expenses, with independent checks against the underlying records.
- Built a Claude assistant querying Postgres and Google Sheets, with a read-only database role, a 500-row limit and per-question cost tracking.
- Protect production patient information with row-level access rules, append-only records, approved corrections and encrypted off-site backups.
- Delivered an eight-minute staff onboarding video and written guide covering clock-ins, corrections, earnings and pay periods.

SELECTED AUTOMATION PROJECTS

Cockpit - Agent Workflow Control Plane | Personal product; not public yet

- Built on DeepSeek Harness; one agent builds, automated checks test, and a separate agent reviews before human approval and a saved code checkpoint.
- Available for a live walkthrough and commit history review. Claude Code made the overview video at kimlj.dev/cockpit.

Shift Ops Console - Workflow Automation Demonstrator | Simulated workforce

- Connected n8n rules, Make daily summaries, Zapier Slack alerts, Power Automate approvals and Looker Studio dashboards for a simulated 100-person workforce.

Jobsift - Automated Intake and Evaluation Pipeline | Python; deployed on Linux

- Rebuilt an n8n workflow in Python when it outgrew the platform; filters unsuitable listings before AI evaluation, then archives to Sheets and alerts through Telegram.
- Diagnosed five days of silent email-processing failures in server logs, traced exhausted AI credits and moved the pipeline to another provider.

MDS Pro Website - Client and Staff Intake | Production

- Built a knowledge-file AI assistant with human handoff and spending limits; route facility inquiries to sales and nurse applications to HR with email confirmations.

EDUCATION

- BS Information Technology, AMA Computer College Makati (3 of 4 years completed; degree not conferred).
