

KIM JULONGBAYAN

Automation and AI Specialist | n8n, Make, Zapier | Lead and Business Workflows

Quezon City, Metro Manila, Philippines | kljulongbayan@gmail.com | +63 961 529 9305

Portfolio: kimlj.dev | GitHub: github.com/kimlj | LinkedIn: linkedin.com/in/kimjulongbayan

PROFESSIONAL SUMMARY

- Automation engineer with 5+ years building software end to end, including n8n, Make and Zapier workflows, AI agents and the APIs around them. Sole engineer on a production platform 15 people use every workday.
- 772 hours and 16,252 prompts in Claude Code across 43 projects (149 active days, as of Sep 2026), counted from session transcripts and published at kimlj.dev.

TECHNICAL SKILLS

- Workflow automation: n8n (self-hosted), Make, Zapier, Microsoft Power Automate, Google Apps Script, scheduled jobs, webhooks, error handling, approval steps
- Lead and business workflows: capture, filtering, scoring, routing and alerts; tagging and dedup; email via Gmail and IMAP; Telegram and Slack notifications; reporting
- Languages and data: JavaScript, TypeScript, Python | PostgreSQL, Supabase, Postgres RLS, SQLite | REST APIs, JSON, OAuth, Google Sheets API
- AI: Claude API, OpenAI GPT-4o, AI agents and tool use, prompt engineering | Google Sheets API, Apps Script, ExcelJS reporting, Docker, CI/CD, Git

EXPERIENCE

MDS Pro Solutions - Full Stack Developer (Contract) | Feb 2026 - Present

- Sole engineer on a production platform for a US healthcare company (TypeScript, Fastify, Supabase/Postgres, a Chrome MV3 extension), used every workday by 15 people.
- Automated the owner's billing sheet over the Sheets API with Apps Script reporting panels: a sync that fills only blank cells and reports mismatches rather than overwriting typed figures.
- Shipped an AI agent on the Claude API through a read-only Postgres role under a row cap, with per-answer cost tracking.
- Own the Postgres security model across 44 migrations: 35 row-level-security policies, append-only records, and attributed corrections.
- Wrote the platform's decision and edge-case docs so the owner can follow any workflow without me.

Independent Automation and Full Stack Developer | 2018 - Present

- Built and shipped automation, web and mobile systems end to end: architecture, development, deployment, and maintenance.

PROJECTS

Jobsift - Lead Pipeline Built in n8n, Rebuilt as a Service | n8n, Python

- Built a lead pipeline in n8n (Gmail extraction, GPT-4o scoring, Google Sheets logging, Telegram alerts) and ran it daily, then rewrote it as a self-hosted Python service once the workflow outgrew the platform.
- Hard filters run before any AI call, so a rejected lead never costs one; five sources feed it, with IMAP for the ones that gate their data.

Shift Ops Console - n8n Rules Engine Across Six Platforms | n8n, Make, Zapier, Power Automate

- Schedule-adherence and labor-compliance pipeline for a simulated 100-person workforce: self-hosted n8n as the rules engine, Make for digests, Power Automate for manager approvals, Zapier for urgent Slack alerts.
- Its detector caught 359 of 370 planted anomalies (97.0%); when I audited the scorer behind that number it was wrong, so I rebuilt it and cut reported false positives from 9% to 1.0%.

RecodeAI - AI Website Redesigner | Claude API

- Chained Claude API pipeline: crawl a site, analyze its brand, generate a redesign, and deploy it to a live URL, streamed in real time with per-model cost estimation.

EDUCATION

- Bachelor of Science in Information Technology, AMA Computer College Makati (3 of 4 years completed)
