KIM JULONGBAYAN

Full Stack Developer | TypeScript, React, Node.js, PostgreSQL | API Integration and Security
Quezon City, Metro Manila, Philippines | kljulongbayan@gmail.com | +63 961 529 9305
Portfolio: kimlj.dev | GitHub: github.com/kimlj | LinkedIn: linkedin.com/in/kimjulongbayan

PROFESSIONAL SUMMARY

- Full Stack Developer with 3 years of professional software development experience, sole engineer on a production payroll and billing platform where every figure has to agree to the cent.
- Builds the whole stack alone, from database design and access rules through APIs and third-party integrations to deployment, monitoring and backups.
- Ships web and mobile products to real users, and works inside established open-source codebases with merged pull requests.

TECHNICAL SKILLS

- JavaScript, TypeScript, Python | React, Next.js, Tailwind CSS, HTML5, CSS3, Capacitor, Chrome MV3 | Node.js, Express, Fastify, FastAPI, Socket.IO
- PostgreSQL, Supabase, Postgres row-level security, SQL migrations, MySQL, SQLite | REST APIs, OAuth 2.0, token auth, WebSockets
- Integrations - Anthropic and OpenAI APIs, Google Sheets API, Gmail OAuth, Resend, Privy, Solana web3.js, PayMongo
- Docker, Linux VPS (DigitalOcean), Caddy, Nginx, Git, GitHub Actions, Codemagic, Vercel, Playwright

EXPERIENCE

MDS Pro Solutions - Full Stack Developer (Contract) | February 2026 - Present

- Sole engineer on the timekeeping, payroll and billing platform a US nursing company runs on (TypeScript, Fastify, Supabase/Postgres, Chrome MV3), used every workday by 15 people.
- Clock-ins stamped by the database, append-only records, and every change through an approved, attributed correction trail; no editable payroll spreadsheet.
- Payroll and client invoices built from one shared pay calculation with date-effective rates, so every workbook agrees to the cent and a raise never rewrites a past week.
- Closed a security hole that let any signed-in nurse read every colleague's billed rate on a path the API's admin check never saw; 41 row-level security policies across 51 migrations.
- Handles patient data in production with access rules in the database and nightly encrypted off-site backups; runs the server with process monitoring and alerting.
- Ask AI agent on the Claude API that answers questions with SQL through a read-only Postgres role, capped at 500 rows, with per-question cost tracking.

PROJECTS

WordWarz.io - Real-Time Multiplayer Game, Web, iOS and Android

- React, Capacitor, Node.js and Socket.IO, live on the App Store and Google Play; 570 players since launch across 1,045 matches, with 40 to 70 playing on a given day.
- Owned the signed iOS and Android releases (Codemagic, TestFlight, store review) and a Playwright suite that plays a real match on every pull request.

Cockpit - Agent Development Tool (not public yet)

- One agent builds, automated tests check, a read-only agent reviews, and each git checkpoint waits for approval; film at kimlj.dev/cockpit, live walkthrough and commit history on request.

Casinore.io - Solana Wallet App (hobby)

- React front end on Privy wallet sign-in and Solana web3.js, over an Express and WebSocket backend that verifies Privy tokens on the server.

OPEN SOURCE CONTRIBUTIONS

- recharts, a charting library with over 27,000 GitHub stars (4 merged, 2026): XAxis height="auto" sizing, a connectNulls bug across stacked series, and a redundant axis dispatch, each reviewed by a maintainer.
- mastra, an AI agent framework with over 29,000 GitHub stars: agent model-call retries now honor the provider's Retry-After header.

EDUCATION

- Bachelor of Science in Information Technology - AMA Computer College Makati (3 of 4 years completed)
