

KIM JULONGBAYAN

Claude AI Integration and Automation | Independent Contractor

Quezon City, Metro Manila, Philippines | kljulongbayan@gmail.com | +63 961 529 9305

Portfolio: kimlj.dev | GitHub: github.com/kimlj | LinkedIn: linkedin.com/in/kimjulongbayan

PROFESSIONAL SUMMARY

- Contract developer who builds Claude into systems a business already runs: the API work, the platform around it, the testing and the written handover. Sole engineer on a production platform 15 people use every workday.
- 779 hours and 16,403 prompts in Claude Code across 43 projects (150 active days, as of Sep 2026), counted from session transcripts and published at kimlj.dev.

TECHNICAL SKILLS

- Claude: Claude API in production, system prompt design, structured output, per-question token and cost accounting, spend caps and per-visitor rate limits, 21 custom Claude Code skills and 4 subagents
- Automation platforms: n8n (self-hosted), Make, Zapier, Power Automate, Google Apps Script, Looker Studio
- Integration: REST APIs, webhooks, OAuth, scheduled jobs, Google Sheets API, Gmail and IMAP, Telegram Bot API, Chrome MV3 extensions
- Languages and data: TypeScript, JavaScript, Python | PostgreSQL, Supabase, SQLite | ExcelJS reporting
- Delivery: testing against planted ground truth, written documentation, Docker, Linux VPS, Nginx, Vercel, Git, CI/CD

EXPERIENCE

MDS Pro Solutions - Full Stack Developer (Contract) | Jun 2026 - Present

- Sole engineer on the timekeeping and billing platform used every workday by 15 people: a nursing team across the Philippines, and the owner in the US. I scope, build, test and document it alone.
- Built question-answering on the Claude API over the live database. The model writes the query, a read-only account runs it under a row cap, and the answer is the rows that came back, not anything the model remembered. Cost is recorded per question.
- Automated client billing into the owner's Google Sheet through the Sheets API. The scheduled sync fills only blank cells and reports mismatches instead of overwriting them, so figures the client typed by hand survive.
- Generated the timesheet, payroll and invoice workbooks from one shared pay calculation, so every report agrees to the cent, plus Apps Script panels inside the owner's own spreadsheet.

Independent Developer and Automation Contractor | 2018 - Present

- Build and hand over web, AI and automation systems end to end, including WordWarz.io, live on the web and the iOS App Store: 570 players across 1,045 matches, 40 to 70 on a given day, by word of mouth alone.

SELECTED PROJECTS

Shift Ops Console - One Process, Six Platforms | n8n, Make, Zapier, Power Automate, Apps Script, Looker Studio

- Shift and compliance exception engine for a simulated 100-person workforce across nine timezones, run off a rules table keyed to the law where each person works, Australia included.
- Each platform does what it is best at: n8n runs the rules, Make sends the daily digest, Zapier fires the urgent alert, Power Automate closes the approve and reject loop, Looker Studio draws the dashboards.
- Tested against planted answers rather than eyeballed: 370 anomalies planted, 359 caught, 97.0 percent (Sep 2026), plus the false positives a detection-rate chart would hide.

kimlj.dev Site Assistant - Claude in Public, on a Budget | Claude API

- Answers questions about my work from a knowledge file I maintain rather than from the model's own memory, with per-visitor limits and an hourly spend cap, so a public endpoint cannot run up a bill.

Jobsift - Claude-Scored Job Pipeline | Python, Claude API

- Rewrote an n8n workflow as a self-hosted Python service once it outgrew the platform: five sources, structured records, scoring, a Telegram alert only above threshold. Cheap filters run first, so a rejected job costs no AI call.

OPEN SOURCE

- mastra, the AI agent framework, and recharts, both around 27,000 stars: four merged fixes. One makes a retried model call wait as long as the provider's Retry-After header asks, instead of retrying straight back into a rate limit.

EDUCATION

- Bachelor of Science in Information Technology, AMA Computer College Makati (3 of 4 years completed)
