

KIM JULONGBAYAN

AI Integration and Automation | AI Agents and Assistants | Automated Reporting

Quezon City, Metro Manila, Philippines | kljulongbayan@gmail.com | +63 961 529 9305

Portfolio: kimlj.dev | GitHub: github.com/kimlj | LinkedIn: linkedin.com/in/kimjulongbayan

PROFESSIONAL SUMMARY

- AI and automation developer with 5+ years building software end to end and 3+ years on LLM integration, prompt engineering, and automated workflows. Sole engineer on a production platform 15 people use every workday.
- Finds the manual step in a business process, replaces it with an automation or an AI agent, then measures whether it is right: accuracy, cost per question, and what the AI is allowed to touch.

TECHNICAL SKILLS

- AI agents and assistants: Claude API, OpenAI GPT-4o, DeepSeek, tool-using agents, prompt engineering, structured output validation, cost tracking
- Workflow automation and integration: n8n, Make, Zapier, Power Automate, Google Sheets API, Apps Script, Gmail, Resend email, Telegram and Slack alerts, REST APIs, webhooks
- Reporting: Looker Studio dashboards, Apps Script reporting panels, Excel payroll and invoice workbooks (ExcelJS)
- AI security and access control: read-only AI database accounts, row-level security, rate limits, spend caps, prompt-injection testing
- Languages and data: Python, TypeScript, JavaScript | PostgreSQL, Supabase, SQLite | Docker, Linux VPS

EXPERIENCE

MDS Pro Solutions - Full Stack Developer (Contract) | Feb 2026 - Present

- Sole engineer on the timekeeping and billing platform a US nursing staffing company runs on, used every workday by 15 people: TypeScript, Fastify, Supabase/Postgres and a Chrome extension.
- Built Ask AI, an internal AI agent that answers plain-English questions from the database and the billing sheet through a read-only account capped at 500 rows, with the cost of every question recorded.
- Replaced an editable payroll spreadsheet: clock-ins stamped by the database, append-only records, and every correction approved and attributed.
- Automated billing into the owner's Google Sheet: fills only blank cells and reports mismatches rather than overwriting typed figures. Timesheet, payroll and invoice workbooks come from one calculation.
- Built the public AI assistant on the company site, with no tools, rate limits and an hourly spend cap; questions it cannot answer go to a person by email. Booking and job-application forms route to sales and HR.
- Closed a database permission hole that let any nurse read colleagues' billed rates, on a path the server's admin check never saw.

PROJECTS

Jobsift - Self-Hosted AI Job Pipeline | Python, n8n

- Started as an n8n workflow (Gmail, AI scoring, Google Sheets, Telegram), rebuilt in Python when it outgrew the platform. Throws out obvious misfits before spending anything on an AI call.
- AI split into roles that check each other: an extractor, a drafter, and a verifier that checks each claim. Tested against six hostile postings written to hijack the AI.
- Traced a five-day silent failure to exhausted AI credits in the server log and moved the AI calls to DeepSeek.

Shift Ops Console - Six-Platform Automation | n8n, Make, Zapier, Power Automate

- Schedule and labor-rule alerts for a simulated 100-person workforce, each platform used where it fits: n8n rules, Make digests, Power Automate approvals, Zapier Slack alerts, Looker Studio dashboards.
- Measured its own accuracy: 359 of 370 planted problems caught (97.0%); found its scoring was wrong and rebuilt it, cutting false alarms from 9% to 1.0%.

WordWarz.io - Real-Time Multiplayer Game with AI Bots | React, Node.js

- AI bots at 5 skill levels; 570 players have reached a game across 1,045 matches, 40 to 70 playing on a given day. 60+ avatars from an automated ComfyUI image pipeline.

EDUCATION

- Bachelor of Science in Information Technology, AMA Computer College Makati (3 of 4 years completed)
