KIM JULONGBAYAN

AI Automation Specialist | AI Agents, Scheduled Workflows and Integrations | n8n, Make, Claude API

Quezon City, Metro Manila, Philippines | kljulongbayan@gmail.com | +63 961 529 9305
Portfolio: kimlj.dev | GitHub: github.com/kimlj | LinkedIn: linkedin.com/in/kimjulongbayan

PROFESSIONAL SUMMARY

- Developer with 5+ years of on-and-off experience and 1-2 years building AI agents and automations into real systems, alone, from setup to the person who uses it every day.
- Builds AI that is safe to hand access to: read-only accounts, approval before any action, spend caps, and a log of every run.

TECHNICAL SKILLS

- Automation: n8n, Make, Zapier, Power Automate, Google Apps Script, scheduled jobs, webhooks
- AI: Claude API, OpenAI API, DeepSeek, tool-using agents, MCP servers, Claude Code, Codex, Hermes Agent
- Integrations: Gmail (IMAP), Google Sheets API, Google service accounts, Telegram, REST APIs
- Data and backend: PostgreSQL, Supabase, row-level security, SQLite, Node.js, TypeScript, Python
- Hosting and security: Linux VPS (Ubuntu, systemd), Docker, GitHub Actions, Vercel, encrypted backups, secret rotation

EXPERIENCE

MDS Pro Solutions - Full Stack Developer (Contract) | Feb 2026 - Present

- Sole engineer on the timekeeping and billing platform a US nurse staffing company runs on, used every workday by 15 people, with nightly encrypted off-site backups.
- Built an Ask AI agent on the Claude API with two tools: SQL through a read-only database account (500-row cap) and the Sheets API, with the cost of every question tracked.
- Built the website's public AI assistant with no tools on purpose, guarded by per-visitor rate limits and an hourly spend cap; questions it cannot answer go to a person by email.
- Routed inbound leads: facility bookings go to the sales inbox and nurse applications to HR, each checked on the server and confirmed to the sender by email.
- Synced billing into the owner's Google Sheet on a schedule, filling only blank cells and reporting mismatches instead of overwriting what people typed.

Independent Developer | 2021 - Present

- Built and shipped web, mobile and automation systems end to end: architecture, development, deployment and maintenance.

PROJECTS

Jarvis - Personal AI Assistant | Python, MCP, Docker

- Answers plain questions across 40,000 photos and videos, 2.6 million location points and 231,000 messages, with a daily briefing page. Private, one user.
- Takes actions only after approval in a dialog: every run, event and receipt is stored, two approvals cannot run one action twice, and every action can be undone.

Jobsift - Scheduled Job Data Pipeline | Python, LLM APIs, Linux VPS

- Runs 24/7 on an Ubuntu server: reads email alerts, filters before any AI call, scores with an LLM, and posts to Google Sheets and Telegram. Started in n8n, rebuilt in Python when it outgrew it.

Shift Ops Console - Multi-Platform Automation | n8n, Make, Zapier, Power Automate

- One workflow over a simulated 100-person workforce, split across six platforms by fit: n8n rules, Make digests, Power Automate approvals, Zapier alerts; caught 359 of 370 planted problems.

Cockpit - AI Agent Control Plane | JavaScript, Node.js

- Runs Claude Code and Codex side by side: one agent builds, automated tests verify with no AI involved, a second read-only agent reviews, then I approve and a git checkpoint is saved.

EDUCATION

- Bachelor of Science in Information Technology, AMA Computer College Makati (3 of 4 years completed)
