

KIM JULONGBAYAN

AI Automation Engineer | Full-Stack React and Supabase | Healthcare Systems

Quezon City, Metro Manila, Philippines | kljulongbayan@gmail.com | +63 961 529 9305

Portfolio: kimlj.dev | GitHub: github.com/kimlj | LinkedIn: linkedin.com/in/kimjulongbayan

PROFESSIONAL SUMMARY

- Full stack and AI developer with 5+ years building software end to end and 3+ years on LLM integration and AI agents. Sole engineer on a US healthcare company's production platform, used every workday by 15 people.
- 772 hours and 16,252 prompts in Claude Code across 43 projects (149 active days, as of Sep 2026), counted from session transcripts and published at kimlj.dev.

TECHNICAL SKILLS

- AI and LLM: Claude API, OpenAI GPT-4o, AI agents and tool use, prompt engineering, structured output validation, per-question cost accounting
- Frontend: React, Next.js, TypeScript, JavaScript, HTML, CSS, Tailwind CSS, Chrome MV3 | React Native, Expo
- Backend and data: Node.js, Express, Fastify, REST APIs, WebSockets, Socket.IO | PostgreSQL, Supabase (Postgres, Auth, realtime), Postgres RLS, SQLite
- Security and production: row-level security, access control, encrypted off-site backups, Docker, CI/CD, GitHub Actions, Linux VPS, Nginx, Vercel, Git

EXPERIENCE

MDS Pro Solutions - Full Stack Developer (Contract) | Feb 2026 - Present

- Sole engineer on a production platform for a US healthcare company (TypeScript, Fastify, Supabase/Postgres, Chrome MV3 extension), used every workday by 15 people: a remote nursing team in the Philippines and the owner in the US.
- Own the Postgres security model: 35 row-level-security policies across 44 migrations, append-only records, and attributed, approved corrections.
- Shipped an AI agent on the Claude API: the model writes SQL, a dedicated read-only Postgres role runs it under a row cap, and every answer records its own token and cost.
- Automated client billing into the owner's Google Sheet via the Sheets API: a scheduled sync fills only blank cells and reports mismatches rather than overwriting typed figures.
- Built the admin dashboard in vanilla JS, 6,000+ lines across seven surfaces, with nurse status streaming in live over Postgres realtime.
- Wrote the platform's decision and edge-case docs so the owner can follow any workflow without me.

Independent AI and Automation Developer | 2018 - Present

- Built and shipped AI-integrated web, mobile and automation systems end to end: architecture, development, deployment, and maintenance.

PROJECTS

WordWarz.io - Real-Time Multiplayer Game (Shipped) | React, Node.js, Socket.IO

- Architected a full-stack game on a sub-100ms WebSocket backend (React, Capacitor, Node.js/Socket.IO), shipped to the browser and the iOS App Store, Android in review.
- 570 players have reached a game across 1,045 multiplayer matches, 40-70 playing on a given day, grown by word of mouth alone.

Jobsift - Self-Hosted Job Alert and Scoring Pipeline | Python, n8n

- Rewrote an n8n workflow as a self-hosted Python service once it outgrew the platform, with hard filters that run before any AI call so a rejected job never costs one.

RecodeAI - AI Website Redesigner | Claude API, Next.js

- Chained Claude API pipeline: crawl a site, analyze its brand, generate a redesign, and deploy it to a live URL, streamed in real time with per-model cost estimation.

EDUCATION

- Bachelor of Science in Information Technology, AMA Computer College Makati (3 of 4 years completed)
