KIM JULONGBAYAN

Full Stack Developer | Internal Tools | React, TypeScript, Supabase / PostgreSQL

Quezon City, Metro Manila, Philippines | kljulongbayan@gmail.com | +63 961 529 9305
Portfolio: kimlj.dev | GitHub: github.com/kimlj | LinkedIn: linkedin.com/in/kimjulongbayan

PROFESSIONAL SUMMARY

- Full-stack developer with 3 years of professional software development experience. Sole engineer on an internal timekeeping and billing platform used every workday by 15 people.
- Builds business tools from database rules through dashboards and reports. Uses AI coding tools with automated checks, independent review and documented setup steps.
- Available full time, 40 hours per week, with 9am-1pm US Eastern overlap.

TECHNICAL SKILLS

- TypeScript, JavaScript, React, Node.js, Fastify, Express, Socket.IO, Tailwind CSS; Chrome MV3 extensions.
- Supabase, PostgreSQL, row-level security, SQL migrations, SQLite, Google Sheets API, Apps Script, ExcelJS.
- Claude Code, Playwright, GitHub Actions, Git, Docker, Linux VPS, Nginx, Vercel; setup guides and decision notes.

EXPERIENCE

MDS Pro Solutions - Full Stack Developer (Contract) | Feb 2026 - Present

- Sole engineer on the internal timekeeping and billing platform used daily by 15 people across a Philippine team and a US owner; owns implementation and maintenance.
- Built the TypeScript / Fastify backend, Supabase / Postgres data layer, live admin dashboard and published Chrome extension.
- Generate timesheet, payroll and invoice workbooks from one shared calculation; sync billing into Google Sheets without overwriting manually entered figures.
- Built monthly financial reporting across two companies and independent checks that reconcile source records, sheet totals, pay periods and dashboard figures.
- Corrected a staff-summary bug that displayed a future pay rate too early by resolving rates for the current Manila date using the same logic as payroll.
- Closed a database access-control hole that exposed colleagues' billed rates; maintain server-stamped records, attributed corrections and encrypted off-site backups.

Independent Software Developer | 2021 - Present

- Build and deploy web apps and developer tools end to end. Working demos and project walkthroughs: https://kimlj.dev/hub.

SELECTED PROJECTS

WordWarz.io - Shipped React Application | React, Node.js, Socket.IO

- Built the client, real-time game server and five-tier bot system; released to browsers, the App Store and Google Play through Capacitor.
- Added a CI suite that plays a real match across two browser contexts and checks phone, tablet and desktop layouts against an isolated database.

Cockpit - AI Development Workflow | kimlj.dev/cockpit | Not public yet

- Built on DeepSeek Harness: a builder agent, automated checks, independent review and owner approval before a Git checkpoint. Local application; not public yet.
- Live walkthrough and commit history available. Claude Code made the public overview video; the video is separate from the application.

Jobsift - Data Pipeline and AI-Assisted Development | Python, SQLite, Google Sheets

- Caught a field-mapping error after all 28 source listings failed a live location check; corrected the mapping and added a regression through the actual filter.

EDUCATION

- BS Information Technology, AMA Computer College Makati: 3 of 4 years completed; degree not conferred.
