KIM JULONGBAYAN

Claude Code Automation Developer | TypeScript | API Integrations

Quezon City, Metro Manila, Philippines | kljulongbayan@gmail.com | +63 961 529 9305
Portfolio: kimlj.dev | GitHub: github.com/kimlj | LinkedIn: linkedin.com/in/kimjulongbayan

PROFESSIONAL SUMMARY

- AI and automation developer with 5+ years building software end to end and 1-2 years on LLM integration, prompt engineering, and automated workflows. Sole engineer on a production platform 15 people use every workday.
- 881 hours, 1,063 sessions and 18,521 prompts in Claude Code across 50 projects since Oct 2025 (186 active days, as of Oct 2026), counted from session transcripts and published at kimlj.dev.

TECHNICAL SKILLS

- Claude Code: layered CLAUDE.md rules, custom skills and subagents, plan-then-build with a separate review agent, my own MCP server | Claude API, OpenAI
- Integration and automation: REST APIs, Google Sheets API, Google Apps Script, webhooks, scheduled jobs, serverless API routes, n8n, Make, Zapier, Telegram Bot API
- Languages and data: TypeScript, JavaScript, Python | Fastify, Node.js | PostgreSQL, Supabase, SQLite | admin dashboards, ExcelJS reporting
- Testing and delivery: Playwright, server test suites, GitHub Actions, Git, Docker, Linux VPS, Vercel

EXPERIENCE

MDS Pro Solutions - Full Stack Developer (Contract) | Feb 2026 - Present

- Sole engineer on the timekeeping and billing platform (TypeScript, Fastify, Supabase/Postgres, Chrome MV3 extension) a US nurse staffing company's 15 people use every workday.
- Shipped natural-language database querying on the Claude API: the model writes SQL, a dedicated read-only Postgres role executes it under a row cap, and per-question token and cost accounting is recorded alongside every answer.
- Automated client billing into the owner's Google Sheet via the Sheets API: a scheduled sync fills only blank cells and reports mismatches rather than overwriting typed figures, so the figures the client typed survive.
- Generated timesheet, payroll and client-invoice Excel workbooks with ExcelJS from one shared pay calculation, so every surface agrees to the cent.
- Replaced an editable payroll spreadsheet: punches are stamped by Postgres, records are append-only, and every correction flows through an approved, attributed trail under row-level security.

Independent AI and Automation Developer | 2021 - Present

- Built and shipped AI-integrated web, mobile and automation systems end to end: architecture, development, deployment, and maintenance.

PROJECTS

Jobsift - Job Pipeline Built with Claude Code (github.com/kimlj/jobsift) | Python

- Started as an n8n workflow and rebuilt as a service when it hit the platform's limits: reads job boards' own APIs and email alerts, filters before any AI call, keeps a SQLite store, a Google Sheet and Telegram alerts in sync.
- Runs 24/7 on a Linux server as a scheduled service. When a new source's first live run rejected all 28 roles from one employer, traced it to a label mapping and added a regression test through the real check.

Cockpit - Control Plane for Claude Code and Codex Agents (film at kimlj.dev/cockpit) | JavaScript

- Persistent Claude Code and Codex terminals per project, and a task loop: one agent builds, tests run with no AI involved, a read-only agent reviews in a fixed format, then I approve and it commits. Claude Code made the film.

WordWarz.io - Real-Time Multiplayer Game | React, Node.js, Socket.IO

- Live in the browser, the App Store and Google Play, with 40-70 playing on a given day (570 players since launch, across 1,045 matches). A Playwright suite plays a real match across two browsers on every pull request.

EDUCATION

- Bachelor of Science in Information Technology, AMA Computer College Makati (3 of 4 years completed)
