

KIM JULONGBAYAN

Virtual Assistant | Reporting, Operations Support and AI Tools

Quezon City, Metro Manila, Philippines | kljulongbayan@gmail.com | +63 961 529 9305

Portfolio: kimlj.dev | GitHub: github.com/kimlj | LinkedIn: linkedin.com/in/kimjulongbayan

PROFESSIONAL SUMMARY

- Developer moving into marketing support, with hands-on Google Sheets reporting, record checks, automated alerts and asset workflows. Built and maintain business tools used every workday by 15 people.
- Remote every workday for a US company, with the owner in the US and the team across the Philippines. Clear written updates, US business hours, English at C2.

SKILLS

- Operations tools: Zapier, Make, n8n, Power Automate, Google Apps Script; alerts, digests and approvals
- Spreadsheets and reporting: Google Sheets (formulas, cleanup, syncing), Excel workbooks, Looker Studio dashboards
- Communication: Gmail, Slack, Telegram, website forms with automatic confirmation emails
- AI tools: ChatGPT, Claude and DeepSeek every day, prompt writing, website chat assistants
- Marketing support: website updates, referral and UTM tracking, AI asset generation and automatic file naming

EXPERIENCE

MDS Pro Solutions - Full Stack Developer (Contract) | February 2026 - Present

- Built the owner's billing Google Sheet sync to fill blanks and flag mismatches for review, preserving manually entered expenses rather than replacing valid figures.
- Built and run the timekeeping and billing system used every workday by 15 people, including nurses, staff, admins and the US owner.
- Set up the website's intake: booking requests go to the sales inbox and nurse applications go to HR, each checked for spam and each sending the person an automatic confirmation email.
- Added a website chat assistant that answers visitors' questions and passes anything it cannot answer to a person by email, with a spending cap so it cannot run up a bill.
- Built an AI helper for questions about hours and pay, reading actual records with read-only access and tracking the cost of each question.
- Generate timesheet, payroll and invoice Excel workbooks from one pay calculation, so every document agrees to the cent.
- Handle real patient and payroll records under access rules, with nightly encrypted backups.

Independent Full Stack Developer | 2018 - Present

- Built and ran web apps, bots and automations for my own projects, from the first version to the live server.

PROJECTS

Shift Ops Console - One Workflow Across Six Automation Tools

- Built in one day for a simulated 100-person workforce, each part on the tool that suits it: Zapier for urgent Slack alerts, Make for the daily digest, n8n for the rules, Power Automate for approvals.
- Checked it by planting 370 known problems. It caught 359 (97%), and when my own scoring proved wrong I rebuilt it, cutting false alarms from 9% to 1%.

Jobsift - A Job Tracker That Runs Itself

- Started as an n8n workflow (Gmail, AI scoring, Google Sheets, Telegram alerts) and rebuilt when it outgrew it. Runs 24/7, logging every job into a Google Sheet with a stage column.
- Merges duplicates across job boards, so one company written two different ways becomes one row.

WordWarz.io - Acquisition Tracking and Asset Workflows

- Built referral and UTM tracking to distinguish search, AI and community sources, linking landing-page visits and Play clicks to game activity for reporting.
- Automated naming, background removal and compression for 60+ AI-generated avatars shipped in the game. Game assets, not client advertising work.
- Work and demonstrations at <https://kimlj.dev/hub>; game live on the web, App Store and Google Play.

EDUCATION

- BS Information Technology coursework, AMA Computer College Makati (3 of 4 years completed; degree not conferred)
