KIM JULONGBAYAN

AI Automation & Integration Developer | Codex and Claude Code

Quezon City, Metro Manila, Philippines | kljulongbayan@gmail.com | +63 961 529 9305
Portfolio: kimlj.dev | GitHub: github.com/kimlj | LinkedIn: linkedin.com/in/kimjulongbayan

PROFESSIONAL SUMMARY

- Developer with 3 years of professional software experience. Sole engineer on a production timekeeping and billing platform used every workday by 15 people.
- Build API integrations, scheduled reports and AI-assisted workflows, with automated checks, documented recovery steps and restricted data access. Demos at kimlj.dev/hub.

TECHNICAL SKILLS

- Automation: n8n, Make, Zapier, Google Apps Script, Google Sheets API, REST APIs, scheduled jobs
- Development: Python, TypeScript, JavaScript, Fastify, PostgreSQL, Supabase, SQLite, ExcelJS
- AI and operations: Codex, Claude Code, Claude API, Docker, Linux VPS, GitHub Actions, Playwright

EXPERIENCE

MDS Pro Solutions - Full Stack Developer (Contract) | Feb 2026 - Present

- Built and maintain the timekeeping and billing platform, including its database, API, Chrome extension and admin reporting, for a remote Philippine team and US owner.
- Automated billing into the owner's Google Sheet. The scheduled sync fills blank cells and reports mismatches without overwriting manually entered figures.
- Built monthly financial reporting across two companies, with an independent read-only check against source entries, pay periods and dashboard totals.
- Closed a database permissions hole exposing colleagues' billing rates. Maintain attributed corrections, restricted access and nightly encrypted off-site backups.
- Built an AI reporting assistant with a database account that can only read, a 500-row limit and per-question cost tracking.
- Built website forms that route enquiries to sales and applications to HR, validate submissions on the server and send confirmation emails.

SELECTED PROJECTS

Cockpit - Local Agent Workspace | Codex, Claude Code

- Built the workspace and task controls on DeepSeek Harness. An agent builds, automated checks run, a separate read-only agent reviews, and I approve the result.
- The product is not public yet. I can offer a live walkthrough and commit history. Claude Code made the video at kimlj.dev/cockpit.

Shift Ops Console - Automation Demonstrator | n8n, Make, Zapier

- Built rules, daily digests, approvals and urgent Slack alerts for a simulated 100-person workforce across nine timezones, with documented setup and fixture tests.
- Fixed repeated sheet reads in n8n that multiplied incoming rows, and tested rules against fixtures before importing the generated workflow.

Jobsift - Self-Hosted Job Pipeline | Python, APIs

- Rebuilt an n8n email workflow in Python to collect listings, filter them before AI scoring, archive results in Google Sheets and send Telegram alerts.
- Maintain the Linux service, a watchdog for its remote worker, checked database backups and written rollback steps.
- Hardened the link fetcher against private addresses and tested hostile URLs and prompt-injection attempts before trusting external posting content.

EDUCATION

- BS Information Technology, AMA Computer College Makati (3 of 4 years completed; degree not conferred)
